Pedagogical and Psychological Foundations of the Formation of A Culture of Reading in Readers in the Justice Policy of Mirziyoyev SH.M.

Jamaliddinova D.M, Tajiboyeva N.G'

Doctor of Philological Sciences, Professor of the KSPI, Uzbekistan

KSPI, Master of the 2nd stage, Uzbekistan

For the comprehensive development of society in our country, a number of works are being carried out to print, distribute book products, widely promote book reading among the population, to form a culture of reading in youth. And the systematic work in this regard is based on the decree of the president of the Republic of Uzbekistan “on a comprehensive program of measures to develop the system of publication and distribution of Book products, increase and promote the culture of reading and reading” of September 13, 2017.

The decision provides for the restoration, rapid development of the culture of reading in society, decision-making of a positive attitude towards reading and reading in the population, in particular, young people, and decision-making of ways to achieve the transformation of book reading into everyday activity.

Including :”state support for the printing and distribution of book products, the improvement of the regulatory framework for the further development of publishing and Printing Industries, the publication of socially significant books, especially literature intended for children; ” [1] such as the implementation of work in the first part of the resolution program, the lack of works of art for younger readers, the The focus on children's literature has proven to be one of the most important tasks in the formation of a culture of reading in children of preschool and younger school age. As a result of it, today a number of books and works have been published for small school-age dead.

The implementation of the work “to take measures to prevent the preparation, printing and distribution of literature, the content of which is shallow, does not correspond to our national spirituality and values, moral standards, which can negatively affect the upbringing of young people,” the consciousness, psychology of the future generation of the most important factors in the preservation of the values of

As well as the systematic and effective organization of propaganda work on increasing the reading and reading culture, the organization of qualifying and Republican stages of such contests among readers, librarians and propagandists as “the most Reading School”, “the most reading neighborhood”, “the most reading family”, “the most active librarian” at a high level.”[2] the mavjidness of the program laid the foundation for the revival of ananaliri, such as giving a book reading to the children of older people from the values of the disappearing Uzbek nation. In every family, the book led to the reappearance of his youth. For young book lovers, the organization of such visual contests served as a real motivation, and for avid readers-as a kind of encouragement.

The president argues that” the boy who reads one book today is the one who controls the boy who sees ten TVs Tomorrow ” [2]. At the heart of these words, we can understand to what extent the book develops the mind, thinking of the child and is an elusive force to the higher.

From the legal basis for the formation of the culture of reading in youth, we can cite the resolution of the Cabinet of Ministers of the Republic of Uzbekistan dated December 14, 2020 No. 781 “on approval of the national program for the development and support of the culture of reading in 2020-2025”. The decision clarifies the current problems in the formation and development of the culture of reading today, the measures taken to develop reading and several other issues.

Priorities for the implementation of the program are defined as:

population, first of all, to print books with high quality that meet the spiritual-educational, artistic-aesthetic requirements of young people, to promote the activities of publishers and creators, to support the printing of literature intended for children;

translation of the best examples of national and world literature, raising the culture of reading, developing a culture of reading in remote regions of the Republic and age;

to simplify the procedures for organizing book sales, to improve the delivery of newly published books and the distribution system of information sources;

adapting book suppliers to modern social needs, improving infrastructure, filling information and library centers with printed publications and their electronic copies, creating e-books, digitizing books and creating electronic catalogs, and systematically updating;

systematic study of the level of reading and interest of the population in the book, Organization of projects and competitions aimed at developing the culture of reading, increasing the potential of librarian personnel;

expanding international cooperation to order Foreign works online, bring them to the territory of the Republic and develop a distribution system, as well as a culture of Reading[3].

The basis of the work carried out and ongoing is based on the pedagogical and psychological point of view. The necessary factors are being created for the formation of a culture of reading in the population as well as young people, students of junior school age. In particular: the re-Islamization of the library system has led to the establishment of libraries in remote areas as well. Today in our republic there are more than 12 thousand libraries belonging to 20 different ministries and departments. They store a total of more than 23 millions of books[4].

The revision of the quality and level of works of art, especially the increased attention to children's literature, leads to the formation of a relational ideological immunity to iodine ideas from the pedagogical and psychological point of view of the upbringing and consciousness of children.
