# Trivariate Poisson Processes for Modeling the Stage Dependent Cancer Cell Growth 

P. Tirupathi Rao ${ }^{1}$, B.N. Naveen Kumar ${ }^{2}$, J.Jayabharathiraj ${ }^{3}$<br>Dept. of Statistics, Pondicherry University, Puducherry-605014, India ${ }^{1 \& 3}$<br>Dept. of Statistics, S.V. University, Tirupati-517502, A.P., India ${ }^{2}$

#### Abstract

Studying the cancer cell growth through trivariate Poisson processes is the core objective of this paper. The parameters on growth, transitions and loss processes at different independent and inter dependent stages are considered for stochastic modeling of cancer growth in a human body. Formulation of joint probability functions and deriving statistical measures were carried out through differential equations. Model behaviour was analyzed with numerical data.

Keywords: Trivariate Poisson Processes, Stochastic Modeling, Differential Equations and state dependent Cancer Growth

## I. Introduction

Cancer is due to the failure of regulating mechanism on cell division, leads to continuous proliferation and growth of cells. The deviation in the growth and division programming of normal cells will initiate the cancer formations and its invasion. This may be due to several unexplained reasons. Cancer cells have different DNA compared to normal/healthy cells. The division of normal cell is in standard pace and it is governed by DNA, proto-oncogenes, tumor suppressor gene, repair gene, etc. The state of repair gene fails/turned off/unable to fix the problem in the cells will generate rapid cell division in the organ. These factors will provoke rapid and uncontrolled cell division is a prime characteristic of cancer.
Assessment of cancer status through mathematical modeling is a fit in approach of understanding its growth. It has attracted good attention of researchers in mathematical biology. Counting the number of cancer causing cells in the tumor of different categories through manual methods is hypothetical and beyond experimentations. The numbers of cells in different categories of human body are variables and influenced by several uncertainties. Hence, there is a need in understanding the cancer growth with stochastic modeling of biological issues.

The pioneering work on quantification of cancer growth was done by Mayneord [1]. Kendall [2] has given a breakthrough in modeling a cell growth using the uni-variate birth and death process. Neyman et al. [3] have used linear birth and death process to describe the tumor growth as density dependent. First order partial differential equations have been used by Macro et al. [4], Murray [5] and Dewanji et al. [6] to develop mathematical models for studying the cancer growth. The limitations on the deterministic assumptions of biological issues in modeling the cancer growth leads to development of many models based on stochastic assumptions by Neymann [7]; Wette et al. [8]; Dubin [9]; Serio [10]; Tan et al. [11]; Moolgovkar et al. [12]; Hanin et al. [13]; Rinaldo [14], etc., Studies of two stage stochastic modeling of cancer growth with linear birth and death processes was initiated by Birkhead [15] Later on Tirupathi Rao et al. [16], Madhavi et al. [17], Tirupathi Rao et al. [18], [19], [20] and [21] have developed several two stage stochastic models for cancer cell growth. The above reported research work has focused up to the two stage stochastic modeling for studying the growth of cancer cell. However, three stage stochastic modeling is considered to be more appropriate and will provide suitable insights of the cancer growth.

This study is focused on modeling the three stage cancer growth using trivariate Poisson processes. The first stage is considered to be the cell is in normal status. The existing normal cells may generate some more normal cells, some of them may be transformed in to mutant cells or a part of them may be exposed to the risk of death. The second stage is considered to be a cell is in the status of mutant (transformed from normal). These cells may generate some more

## Vol. 3, Issue 5, May 2014

mutant cells (benign cells) with the same intensity of growth, some of the mutant cells may further transformed into a cancerous cell (malignant cell) or a part of the mutant cells may exposed to the event of death. The third stage is considered to be the cell is in malignant state. These cells may further produce some more malignant cells with faster rate or a part of them may be exposed to the event of death. Stochastic modeling is carried out under the biological and theoretical assumptions of cancer pathophysiology as the happenings of the cell division are purely random and influenced by chance factors. The following is a schematic diagram for cancer growth in three stages.

Figure-1: Schematic Diagram for Three Stage Cancer Growth

## II. Stochastic Model for Cancer Growth

A Stochastic model for three stage cancer cell growth is developed with the following assumptions. Let the events occurred in non-overlapping intervals of time are statistically independent. Let $\Delta \mathrm{t}$ be an infinitesimal interval of time. Let there be ' $n$ ' normal cells, ' $m$ ' mutant cells, ' $k$ ' malignant cells initially at time ' $t$ ' for any $n, m, k>0$.
Let $\lambda_{i}$ be the rate of growth of cells in ith stage from the same stage; $\mu_{i}$ be the rate of loss of cells in the ith stage from the same stage; $\delta_{j k}$ be the rate of transformation of cells from the jth stage to kth stage. Where, 'i' be the stage of cancer cell, $\mathrm{i}=1,2,3$ denoted by normal, mutant and malignant stage respectively; ' j ' be the transformation of cells to the kth stage, $\mathrm{j}=1,2$ and $\mathrm{k}=2,3$ denoted by from normal to mutant and from mutant to malignant.
Let $\{\mathrm{N}(\mathrm{t}), \mathrm{t} \geq 0\},\{\mathrm{M}(\mathrm{t}), \mathrm{t} \geq 0\},\{\mathrm{N}(\mathrm{t}), \mathrm{t} \geq 0\}$ be individual stochastic processes of normal cell, mutant cell and malignant cell. Such that, $P\{\mathrm{~N}(\mathrm{t})=\mathrm{n}\}=P_{n}(\mathrm{t}), P\{\mathrm{M}(\mathrm{t})=m\}=P_{m}(\mathrm{t}), P\{\mathrm{~K}(\mathrm{t})=k\}=P_{k}(\mathrm{t})$ and the joint processes will be $P\{(\mathrm{~N}(\mathrm{t}), \mathrm{M}(\mathrm{t}), \mathrm{K}(\mathrm{t}))=(n, m, k)\}=P_{n, m, k}(\mathrm{t})$.
Let

$$
\begin{aligned}
P_{n, u} & =P\{\mathrm{~N}(\Delta \mathrm{t})=\mathrm{u} / \mathrm{N}(\mathrm{t})=\mathrm{n}\} & & \\
& =n \lambda_{1} \Delta t+o(\Delta \mathrm{t}) & & ; u=n+1 \\
& =n \mu_{1} \Delta t+o(\Delta t) & & ; u=n-1 \\
& =1-\left\{\mathrm{n}\left(\lambda_{1}+\mu_{1}\right) \Delta \mathrm{t}+\mathrm{o}(\Delta \mathrm{t})\right\} & & ; u=n \\
& =o(\Delta t)^{2} & & ; u=n \pm 2 \\
P_{\mathrm{m}, \mathrm{v}} & =P\{\mathrm{M}(\Delta \mathrm{t})=v / \mathrm{M}(\mathrm{t})=m\} & & \\
& =m \lambda_{2} \Delta t+o(\Delta \mathrm{t}) & & ; v=m+1 \\
& =m \mu_{2} \Delta t+o(\Delta t) & & ; v=m-1 \\
& =1-\left\{\mathrm{m}\left(\lambda_{2}+\mu_{2}\right) \Delta \mathrm{t}+\mathrm{o}(\Delta \mathrm{t})\right\} & & ; v=m \\
& =o(\Delta t)^{2} & & ; v=m \pm 2
\end{aligned}
$$

& =o(\Delta t)^{2} & & ; w=k \pm 2
\end{array}
$$

for any $\mathrm{n}, \mathrm{m}, \mathrm{k}>0$.

$$
\begin{aligned}
P_{n u, m v, k w}= & P\{[(\mathrm{~N}(\Delta \mathrm{t}), \mathrm{M}(\Delta \mathrm{t}), \mathrm{K}(\Delta \mathrm{t}))=(u, v, w)] /[((\mathrm{N}(\mathrm{t}), \mathrm{M}(\mathrm{t}), \mathrm{K}(\mathrm{t}))=(\mathrm{n}, \mathrm{~m}, \mathrm{k})]\} \\
= & n \lambda_{1} \Delta t+o(\Delta t) ; u=n+1, v=m, w=k \\
= & n \mu_{1} \Delta t+o(\Delta t) ; \mathrm{u}=n-1, v=m, w=k \\
= & m \lambda_{2} \Delta t+o(\Delta t) ; \mathrm{u}=n, v=m+1, w=k \\
= & m \mu_{2} \Delta t+o(\Delta t) ; \mathrm{u}=n, v=m-1, w=k \\
= & k \lambda_{3} \Delta t+o(\Delta t) ; u=n, v=m, w=k+1 \\
= & k \mu_{3} \Delta t+o(\Delta t) ; \mathrm{u}=n, v=m, w=k-1 \\
= & n \delta_{12} \Delta t+o(\Delta t) ; u=n, v=m+1, w=k \\
= & m \delta_{23} \Delta t+o(\Delta t) ; u=n, v=m, w=k+1 \\
= & 1-\left\{\left[\mathrm{n}\left(\lambda_{1}+\mu_{1}+\delta_{12}\right)+\mathrm{m}\left(\lambda_{2}+\mu_{2}+\delta_{23}\right)\right.\right. \\
& \left.\left.\quad+\mathrm{k}\left(\lambda_{3}+\mu_{3}\right)\right] \Delta t+o(\Delta t)\right\} ; u=n, v=m, w=k \\
= & o(\Delta t)^{2} ; u=n \pm 2, v=m \pm 2, w=k \pm 2
\end{aligned}
$$

Let $P_{n, m, k}(t)$ be the joint probability of existence of ' n ' normal cells, ' m ' mutant cells and ' k ' malignant cells in a tumor per unit time' $t$ '. Then Differential difference equations of the model are:

$$
\begin{aligned}
P_{n, m, k}^{\prime}(t)= & -\left[n\left\{\lambda_{1}+\delta_{12}+\mu_{1}\right\}+m\left\{\lambda_{2}+\delta_{23}+\mu_{2}\right\}+k\left\{\lambda_{3}+\mu_{3}\right\}\right] P_{n, m, k}(t) \\
& +\left[(n-1) \cdot \lambda_{1}\right] P_{n-1, m, k}(t)+\left[(n+1) \cdot \mu_{1}\right] P_{n+1, m, k}(t)+\left[(m-1) \cdot \lambda_{2}\right] P_{n, m-1, k}(t) \\
& +\left[(m+1) \cdot \mu_{2}\right] P_{n, m+1, k}(t)+\left[(k-1) \cdot \lambda_{3}\right] P_{n, m, k-1}(t)+\left[(k+1) \cdot \mu_{3}\right] P_{n, m, k+1}(t) \\
& +\left[(n+1) \cdot \delta_{12}\right] P_{n+1, m-1, k}(t)+\left[(m+1) \cdot \delta_{23}\right] P_{n, m+1, k-1}(t)
\end{aligned}
$$

for $n, m, k \geq 1$

$$
\begin{align*}
& P_{1,0,0}^{\prime}(t)=-\mu_{1} P_{1,0,0}(t)+2 \mu_{1} P_{2,0,0}(t)+\mu_{2} P_{1,1,0}(t)+\mu_{3} P_{1,0,1}(t)  \tag{2.2}\\
& P_{0,1,0}^{\prime}(t)=-\mu_{2} P_{0,1,0}(t)+2 \mu_{2} P_{0,2,0}(t)+\mu_{1} P_{1,1,0}(t)+\mu_{3} P_{0,1,1}(t)  \tag{2.3}\\

& P_{1,1,0}^{\prime}(t)=-\left(\mu_{1}+\mu_{2}\right) P_{1,1,0}(t)+2 \mu_{2} P_{1,2,0}(t)+2 \mu_{1} P_{2,1,0}(t)+\mu_{3} P_{1,1,1}(t)+2 \delta_{12} P_{2,0,0}(t)  \tag{2.5}\\
& P_{1,0,1}^{\prime}(t)=-\left(\mu_{1}+\mu_{3}\right) P_{1,0,1}(t)+\mu_{2} P_{1,1,1}(t)+2 \mu_{1} P_{2,0,1}(t)+2 \mu_{3} P_{1,0,2}(t)+\delta_{23} P_{1,1,0}(t)  \tag{2.6}\\
& P_{0,1,1}^{\prime}(t)=-\left(\mu_{2}+\mu_{3}\right) P_{0,1,1}(t)+\mu_{1} P_{1,1,1}(t)+2 \mu_{2} P_{0,2,1}(t)+2 \mu_{3} P_{0,1,2}(t)+2 \delta_{23} P_{0,2,0}(t)  \tag{2.7}\\
& P_{0,0,0}^{\prime}(t)=\mu_{3} P_{0,0,1}(t)+\mu_{2} P_{0,1,0}(t)+\mu_{1} P_{1,0,0}(t)
\end{align*}
$$

With the initial condition

$$
p_{N_{0}, M_{0}, K_{0}}(t)=1, p_{i, j, l}(0)=0 \quad \forall i \neq N_{0}, j \neq M_{0}, l \neq K_{0}
$$

# International Journal of Innovative Research in Science, Engineering and Technology <br> (An ISO 3297: 2007 Certified Organization) 

## Vol. 3, Issue 5, May 2014

Where, $N_{0}$ normal cells, $M_{0}$ mutant cells and $K_{0}$ malignant cells in the tumor.
Let $P(x, y, z ; t)$ be the joint probability generating function of $p_{n, m, k}(t)$;
Where, $P(x, y, z ; t)=\sum_{k=0}^{\infty} \sum_{m=0}^{\infty} \sum_{n=0}^{\infty} x^{n} y^{m} z^{k} p_{n, m, k}(t)$
Multiplying the equations (2.1) to (2.8) with $x^{n} y^{m} z^{k}$ and summing overall $\mathrm{n}, \mathrm{m}$ and k , we obtain

$$
\begin{aligned}
\sum_{k=0}^{\infty} \sum_{m=0}^{\infty} \sum_{n=0}^{\infty} x^{n} y^{m} z^{k} & P_{n, m, k}^{\prime}(t)=\sum_{k=0}^{\infty} \sum_{m=0}^{\infty} \sum_{n=0}^{\infty}-\left[n\left\{\lambda_{1}+\delta_{12}+\mu_{1}\right\}+m\left\{\lambda_{2}+\delta_{23}+\mu_{2}\right\}+k\left\{\lambda_{3}+\mu_{3}\right\}\right] x^{n} y^{m} z^{k} P_{n, m, k}(t) \\
& +\sum_{k=0}^{\infty} \sum_{m=0}^{\infty} \sum_{n=0}^{\infty}\left[(n-1) \cdot \lambda_{1}\right] x^{n} y^{m} z^{k} P_{n-1, m, k}(t)+\sum_{k=0}^{\infty} \sum_{m=0}^{\infty} \sum_{n=0}^{\infty}\left[(n+1) \cdot \mu_{1}\right] x^{n} y^{m} z^{k} P_{n+1, m, k}(t) \\
& +\sum_{k=0}^{\infty} \sum_{m=0}^{\infty} \sum_{n=0}^{\infty}\left[(m-1) \cdot \lambda_{2}\right] x^{n} y^{m} z^{k} P_{n, m-1, k}(t)+\sum_{k=0}^{\infty} \sum_{m=0}^{\infty} \sum_{n=0}^{\infty}\left[(m+1) \cdot \mu_{2}\right] x^{n} y^{m} z^{k} P_{n, m+1, k}(t) \\
& +\sum_{k=0}^{\infty} \sum_{m=0}^{\infty} \sum_{n=0}^{\infty}\left[(k-1) \cdot \lambda_{3}\right] x^{n} y^{m} z^{k} P_{n, m, k-1}(t)+\sum_{k=0}^{\infty} \sum_{m=0}^{\infty} \sum_{n=0}^{\infty}\left[(k+1) \cdot \mu_{3}\right] x^{n} y^{m} z^{k} P_{n, m, k+1}(t) \\
& +\sum_{k=0}^{\infty} \sum_{m=0}^{\infty} \sum_{n=0}^{\infty} x^{n} y^{m} z^{k}\left[(n+1) \cdot \delta_{12}\right] P_{n+1, m-1, k}(t)+\sum_{k=0}^{\infty} \sum_{m=0}^{\infty} \sum_{n=0}^{\infty} x^{n} y^{m} z^{k}\left[(m+1) \cdot \delta_{23}\right] P_{n, m+1, k-1}(t)
\end{aligned}
$$

Simplifying and rearranging the terms in the equation (2.10) we arrive to the following,

$$
\begin{align*}
\frac{\partial}{\partial t} p(x, y, z: t)= & {\left[-\left\{\lambda_{1}+\delta_{12}+\mu_{1}\right\} x+\lambda_{1} x^{2}+\mu_{1}+\delta_{12} y\right] \frac{\partial}{\partial x} p(x, y, z ; t) }  \tag{2.10}\\
& +\left[-\left\{\lambda_{2}+\delta_{23}+\mu_{2}\right\} y+\lambda_{2} y^{2}+\mu_{2}+\delta_{23} z\right] \frac{\partial}{\partial y} p(x, y, z ; t) \\
& +\left[-\left\{\lambda_{3}+\mu_{3}\right\} z+\lambda_{3} z^{2}+\mu_{3}\right) \frac{\partial}{\partial z} p(x, y, z ; t) \tag{2.11}
\end{align*}
$$

We can obtain the characteristics of the model by using the joint cumulant generating function of $p_{n, m, k}(t)$.
Taking $x=e^{u}, y=e^{v}, z=e^{w}$ and denoting $c(u, v, w ; t)$ as the joint cumulant generating function of $p_{n, m, k}(t)$, eq. (2.11) becomes

$$
\begin{align*}
\frac{\partial}{\partial t} c(x, y, z: t)= & {\left[-\left\{\lambda_{1}+\delta_{12}+\mu_{1}\right\}+\lambda_{1} e^{u}+\mu_{1} e^{-u}+\delta_{12} e^{v-u}\right] \frac{\partial}{\partial u} c(x, y, z ; t) } \\
& +\left[-\left\{\lambda_{2}+\delta_{23}+\mu_{2}\right\}+\lambda_{2} e^{v}+\mu_{2} e^{-v}+\delta_{23} e^{w-v}\right] \frac{\partial}{\partial v} c(x, y, z ; t) \\
& +\left[-\left\{\lambda_{3}+\mu_{3}\right\}+\lambda_{3} e^{w}+\mu_{3} e^{-w}\right) \frac{\partial}{\partial w} c(x, y, z ; t) \tag{2.12}
\end{align*}
$$

## III. Differential Equations and Statistical Measures

Let $m_{i, j, l}(t)$ denote the moments of order $(i, j, l)$ of normal cells, mutant cells, malignant cells at time ' $t$ '. Then the differential equation governing $m_{i, j, l}(t)$ are:
$\frac{\partial}{\partial t} m_{1,0,0}(t)=\left(\lambda_{1}-\mu_{1}-\delta_{12}\right) m_{1,0,0}(t)$
$\frac{\partial}{\partial t} m_{0,1,0}(t)=\delta_{12} m_{1,0,0}(t)+\left(\lambda_{2}-\mu_{2}-\delta_{23}\right) m_{0,1,0}(t)$
$\frac{\partial}{\partial t} m_{0,0,1}(t)=\delta_{23} m_{0,1,0}(t)+\left(\lambda_{3}-\mu_{3}\right) m_{0,0,1}(t)$
$\frac{\partial}{\partial t} m_{1,1,0}(t)=-\delta_{12} m_{1,0,0}(t)+\delta_{12} m_{2,0,0}(t)+\left(\lambda_{1}-\mu_{1}-\delta_{12}\right) m_{1,1,0}(t)+\left(\lambda_{2}-\mu_{2}-\delta_{23}\right) m_{1,1,0}(t)$
$\frac{\partial}{\partial t} m_{1,0,1}(t)=\left(\lambda_{1}-\mu_{1}-\delta_{12}\right) m_{1,0,1}(t)+\left(\lambda_{3}-\mu_{3}\right) m_{1,0.1}(t)+\delta_{23} m_{1,1,0}(t)$
$\frac{\partial}{\partial t} m_{0,1,1}(t)=\delta_{12} m_{1,0,1}(t)-\delta_{23} m_{0,1,0}(t)+\delta_{23} m_{0,2,0}(t)+\left(\lambda_{2}-\mu_{2}-\delta_{23}\right) m_{0,1,1}(t)+\left(\lambda_{3}-\mu_{3}\right) m_{0,1,1}(t)$
$\frac{\partial}{\partial t} m_{2,0,0}(t)=\left(\lambda_{1}+\delta_{12}+\mu_{1}\right) m_{1,0,0}(t)+2\left(\lambda_{1}-\mu_{1}-\delta_{12}\right) m_{2,0,0}(t)$
$\frac{\partial}{\partial t} m_{0,2,0}(t)=\delta_{12} m_{1,0,0}(t)+2 \delta_{12} m_{1,1,0}(t)+\left(\lambda_{2}+\mu_{2}+\delta_{23}\right) m_{0,1,0}(t)+2\left(\lambda_{2}-\mu_{2}-\delta_{23}\right) m_{0,2,0}(t)$
$\frac{\partial}{\partial t} m_{0,0,2}(t)=\delta_{23} m_{0,1,0}(t)+2 \delta_{23} m_{0,1,1}(t)+\left(\lambda_{3}+\mu_{3}\right) m_{0,0,1}(t)+2\left(\lambda_{3}-\mu_{3}\right) m_{0,0,2}(t)$
Solving the above relations shall provide the following statistical measures.
Expected number of normal cells at time ' $t$ ' is
$m_{1,0,0}(t)=N_{0} . e^{A t}$
Expected number of mutant cells at time ' t ' is
$m_{0,1,0}(t)=\frac{\delta_{12} N_{0}}{(A-B)}\left[e^{A t}-e^{B t}\right]+M_{0} e^{B t}$
Expected number of malignant cells during time 't' is
$m_{0,0,1}(t)=D e^{C t}\left(\frac{e^{(A-C) t}}{(A-C)}-\frac{e^{(B-C) t}}{(B-C)}\right)+\frac{\delta_{23} M_{0}}{(B-C)} e^{B t}+E . e^{C t}$
Variance of number of normal cells at time 't' is
$m_{2,0,0}(t)=\frac{N_{0} H}{A}\left[e^{2 A t}-e^{A t}\right]$
Variance of number of mutant cells at time 't' is
$m_{0,2,0}(t)=D_{0} \cdot e^{A t}+E_{0} \cdot e^{B t}+F_{0} \cdot e^{2 A t}-G_{0} \cdot e^{(A+B) t}+H_{0} \cdot e^{2 B t}$
Variance of number of malignant cells at time ' $t$ ' is

$$

## IV. Numerical Illustration and sensitivity analysis

In order to understand the model behavior on more detailed way, simulated data sets were obtained. From equations (3.10), (3.11), (3.12), (3.13), (3.14), (3.15), (3.16), (3.17) and (3.18) the values of $m_{1,0,0}(t), m_{0,1,0}(t), m_{0,0,1}(t), m_{1,1,0}(t), m_{1,0,1}(t), m_{0,1,1}(t), \quad m_{2,0,0}(t), m_{0,2,0}(t)$ and $m_{0,0,2}(t) \quad$ are computed and presented in tables (4.1) \& (4.2).

## V. FindingS

The changing patterns of statistical measures with respect to the study parameters are presented in table 4.1 and the following findings are observed. The findings were made by varying a single parameter and keeping other parameters are constant.

- $\mathrm{m}_{100}, \mathrm{~m}_{010}, \mathrm{~m}_{001} \mathrm{~m}_{110}, \mathrm{~m}_{101}, \mathrm{~m}_{011} \mathrm{~m}_{200}, \mathrm{~m}_{020}$, and $\mathrm{m}_{002}$ are increasing with $\lambda_{1}$.
- $\mathrm{m}_{100}$ is invariant and $\mathrm{m}_{010}, \mathrm{~m}_{001}$ are increasing; $\mathrm{m}_{110}$ is invariant, $\mathrm{m}_{101}$ is increasing and $\mathrm{m}_{011}$ is negative \& decreasing; $\mathrm{m}_{200}$ is invariant, $\mathrm{m}_{020}$ is increasing and $\mathrm{m}_{002}$ is decreasing with $\lambda_{2}$.
- $\mathrm{m}_{100}, \mathrm{~m}_{010}$ are invariant and $\mathrm{m}_{001}$ is increasing; $\mathrm{m}_{110}$ is invariant, $\mathrm{m}_{101}$ and $\mathrm{m}_{011}$ are decreasing; $\mathrm{m}_{200}, \mathrm{~m}_{020}$ are invariant and $\mathrm{m}_{002}$ is increasing with $\lambda_{3}$.
- $\mathrm{m}_{100}$ is decreasing function, $\mathrm{m}_{010}$ and $\mathrm{m}_{001}$ are increasing; $\mathrm{m}_{110}, \mathrm{~m}_{011}$ are decreasing and $\mathrm{m}_{101}$ is increasing; $\mathrm{m}_{200}$ is decreasing, $\mathrm{m}_{020}$ and $\mathrm{m}_{002}$ are increasing with $\delta_{1}$.
- $\mathrm{m}_{100}$ is invariant, $\mathrm{m}_{010}$ is decreasing and $\mathrm{m}_{001}$ is increasing; $\mathrm{m}_{110}$ is invariant, $\mathrm{m}_{101}$ and $\mathrm{m}_{011}$ are decreasing; $\mathrm{m}_{200}$ is invariant, $\mathrm{m}_{020}$ is decreasing and $\mathrm{m}_{002}$ is increasing with $\delta_{23}$.
- $\mathrm{m}_{100}, \mathrm{~m}_{010}, \mathrm{~m}_{001} \mathrm{~m}_{110}, \mathrm{~m}_{101}, \mathrm{~m}_{011} \mathrm{~m}_{200}, \mathrm{~m}_{020}$, and $\mathrm{m}_{002}$ are decreasing with time t .

The changing patterns of statistical measures with respect to the study parameters are presented in table 4.2 and the following findings are observed.

- $\mathrm{m}_{100}, \mathrm{~m}_{010}, \mathrm{~m}_{001} \mathrm{~m}_{110}, \mathrm{~m}_{101}, \mathrm{~m}_{011} \mathrm{~m}_{200}, \mathrm{~m}_{020}$, and $\mathrm{m}_{002}$ are decreasing with $\mu_{1}$.
- $\mathrm{m}_{100}$ is invariant, $\mathrm{m}_{010}$ and $\mathrm{m}_{001}$ are decreasing; $\mathrm{m}_{110}$ is invariant, $\mathrm{m}_{101}$ and $\mathrm{m}_{011}$ are decreasing; $\mathrm{m}_{200}$ is invariant, $\mathrm{m}_{020}$ is decreasing function and $\mathrm{m}_{002}$ is increasing with $\mu_{2}$.
- It is observed that $m_{100}, m_{010}$ are invariant and $m_{001}$ is decreasing function of $\mu_{3} m_{110}$ is invariant and $m_{101}, m_{011}$ are increasing functions of $\mu_{3} ; \mathrm{m}_{200}, \mathrm{~m}_{020}$ are invariant and $\mathrm{m}_{002}$ is decreasing function of $\mu_{3}$.
- $\mathrm{m}_{100}, \mathrm{~m}_{010}$ and $\mathrm{m}_{001}$ are increasing; $\mathrm{m}_{110}, \mathrm{~m}_{101}$ and $\mathrm{m}_{011}$ are increasing; $\mathrm{m}_{200}, \mathrm{~m}_{020}$, and $\mathrm{m}_{002}$ are increasing with $\mathrm{N}_{0}$.
- $\mathrm{m}_{100}$ is invariant, $\mathrm{m}_{010}$ and $\mathrm{m}_{001}$ are increasing; $\mathrm{m}_{110}, \mathrm{~m}_{101}$ are invariant and $\mathrm{m}_{011}$ is decreasing; $\mathrm{m}_{200}$ is invariant, $\mathrm{m}_{020}$ and $\mathrm{m}_{002}$ are increasing with $\mathrm{M}_{0}$.
- $\mathrm{m}_{100}, \mathrm{~m}_{010}$ are invariant and $\mathrm{m}_{001}$ is increasing; $\mathrm{m}_{110}, \mathrm{~m}_{101}$, and $\mathrm{m}_{011}$ are invariant; $\mathrm{m}_{200}, \mathrm{~m}_{020}$ are invariant and $\mathrm{m}_{002}$ is increasing with $\mathrm{K}_{0}$.

## VI. ACKNOWLEDGEMENTS

The authors are thankful to acknowledge the funding agency to extract this study as the first author is the principal investigator of a major research project work entitled "Studies on Stochastic Models for Cancer Growth and its Applications with Optimal Drug Administration in Chemotherapy" sponsored by the Scientific and Engineering Research Board (SERB), Department of Science and Technology (DST), Govt. of India.

## BIOGRAPHY

Dr. Tirupathi Rao Padi is presently working as Associate Professor, Dept. of Statistics, Pondicherry University, India. He has 23 years of teaching experience to teach undergraduate, post graduate programs. He has 36 Published research articles in peer reviewed journals, published 9 text books for graduate courses in statistics, completed 2 research projects and 1 is ongoing project, organized 24 academic programs, delivered 60 invited talks at various National and international academic and research forums, Presented 62 research papers, participated in 53 conferences/workshops, guided 3 M . Phil. degrees, supervising 4 Ph . D . programs. His areas of research include Stochastic Modeling, Applied Operational research, Bio statistics, etc.

B.N. Naveen Kumar is presently Ph.D. full time Research Scholar cum UGC-SAP-DRS-I Project Fellow in the Department of Statistics, Sri Venkateswara University, Tirupati, India. He did his Post Graduation in Statistics at Sri Venkateswara University, Tirupati, India. He has published three research articles in international journals, Presented 9 research papers, participated in 24 conferences/workshops.

J. Jayabharathiraj is presently Ph.D. full time Research Scholar in the Department of Statistics, Pondicherry University, Puducherry, India. He did his Post Graduation in Statistics at Pondicherry University, Puducherry, India. Also, He is Junior Research Fellow sponsored by the Scientific and Engineering Research Board (SERB), Department of Science and Technology (DST), Govt. of India. He has presented four research papers and participated 9 in National and International conferences /workshops/seminars

## Appendix

Table 4.1: Values of $m_{100}, m_{010}, m_{001} m_{110}, m_{101}, m_{011} m_{200}, m_{020}$, and $m_{002}$ for varying values of $\lambda_{1}, \lambda_{2}, \lambda_{3}, \delta_{1}, \delta_{2}$ and $t$, when the remaining are constants.

| $\lambda_{1}$ | $\lambda_{2}$ | $\lambda_{3}$ | $\delta_{12}$ | $\delta_{23}$ | t | $\mathbf{m}_{100}$ | $\mathbf{m}_{010}$ | $\mathbf{m}_{001}$ | $\mathbf{m}_{110}$ | $\mathbf{m}_{101}$ | $\mathbf{m}_{011}$ | $\mathbf{m}_{200}$ | $\mathbf{m}_{020}$ | $\mathrm{m}_{002}$ |
