# New Results on Vertex Prime Graphs 

Dr. A. Selvam Avadayappan ${ }^{1}$, R. Sinthu ${ }^{2}$<br>Associate Professor, Department of Mathematics, V.H.N.S.N. College, Virudhunagar, Tamil Nadu, India<br>Research Scholar, Department of Mathematics, V.H.N.S.N. College, Virudhunagar, Tamil Nadu, India

#### Abstract

A graph $G(V, E)$ is said to have a vertex prime labeling if its edges can be labeled with distinct integers from $\{1,2,3, \ldots,|\mathrm{E}|\}$ such that for each vertex of degree at least 2 , the greatest common divisor of the labels on its incident edges is 1 . A graph that admits a vertex prime labeling is called a vertex prime graph.

In this paper, we prove that $\mathrm{mK}_{3,3}$ and $\mathrm{mK}_{4,4}$ are vertex prime graphs, where m is any positive integer.

KEYWORDS: labeling of graphs, vertex prime labeling of graphs.
Subject Classification Code (2000):05C(Primary)

## I.INTRODUCTION

Let $\mathrm{G}(\mathrm{V}, \mathrm{E})$ be a graph. For notations and terminology, we follow [1]. G is called a vertex prime graph if there is a bijection $\mathrm{f}: \mathrm{E} \rightarrow\{1,2,3, \ldots,|\mathrm{E}|\}$ such that for any vertex v , gcd $\{\mathrm{f}(\mathrm{uv})\}=1$. The bijection f is called a vertex prime labeling of $G$.

For example, vertex prime labelings of some known graphs are illustrated in Figure 1.

Figure 1

The concept of vertex prime graphs has been introduced by T. Deretsky, S.M. Lee and J. Mitchem [3] in 1991. They proved that the forests; any connected graph; $C_{2 k} \cup C_{n} ; C_{2 k} \cup C_{2 n} \cup C_{2 k+1} ; C_{2 m} \cup C_{2 n} \cup C_{2 t} \cup C_{k}$; and $5 C_{2 m}$ are vertex prime. They have further proved that a graph with exactly 2 components, one of which is not an odd cycle has a vertex prime labeling and a 2 - regular graph with atleast two odd cycles does not have a vertex prime labeling. They have conjectured that a 2 - regular graph has a vertex prime labeling if and only if it does not have two odd cycles. Let $G=\bigcup_{i=1}^{t} C_{2 n_{i}}$ and $N=\sum_{i=1}^{t} n_{i}$. In [2] I. Borosh, D. Hensley and A. Hobbs proved that there is a positive constant $n_{0}$ such that the conjecture of Deretsky et al., is true for the following cases:
i) G is the disjoint union of atmost seven cycles, or
ii) $G$ is a union of cycles all of the same even length 2 n if $\mathrm{n} \leq 1,50,000$

or if $\mathrm{n} \geq \mathrm{n}_{0}$, or
iii) $n_{i} \geq(\log N)^{4 \log \log \log N}$ for all $i=1,2,3, \ldots, t$, or
iv) Each $C_{2 n_{i}}$ is repeated atmostn ${ }_{i}$ times.

In [4], SelvamAvadayappan and R. Sinthu proved that $\mathrm{mK}_{2,3}$ is vertex prime.
In this paper, we prove the vertex primeness of the union of m disjoint copies of the complete graphs $\mathrm{K}_{3,3}$ and $\mathrm{K}_{4,4}$.

## II. BACKGROND OR RELATED WORK

Mean graphs and Super mean graphs are the related works.

## III. PRESENTATION OF THE MAIN CONTRIBTION OF THE PAPER / SCOPE OF RESEARCH

We prove that $\mathrm{mK}_{3,3}$ and $\mathrm{mK}_{4,4}$ are vertex prime graphs through the definition of vertex prime graphs. We also work on the general case of this theorem.

## IV. EXPERIMENTAL RESULTS

We proved that $\mathrm{mK}_{3,3}$ and $\mathrm{mK}_{4,4}$ are vertex prime graphs.
Theorem 1 For any positive integer $m$, the graph $\mathrm{mK}_{3,3}$ is a vertex prime graph.
Proof

$$
\text { Let } \mathrm{V}\left(\mathrm{mK}_{3}, 3\right)=\left\{\mathrm{u}_{1}{ }^{1}, \mathrm{u}_{2}{ }^{1}, \mathrm{u}_{3}{ }^{1} ; \mathrm{u}_{1}{ }^{2}, \mathrm{u}_{2}{ }^{2}, \mathrm{u}_{3}{ }^{2} ; \ldots ; \mathrm{u}_{1}{ }^{\mathrm{m}}, \mathrm{u}_{2}{ }^{\mathrm{m}}, \mathrm{u}_{3}{ }^{\mathrm{m}} ; \mathrm{v}_{1}{ }^{1}, \mathrm{v}_{2}{ }^{1}, \mathrm{v}_{3}{ }^{1} ; \mathrm{v}_{1}{ }^{2}, \mathrm{v}_{2}{ }^{2}, \mathrm{v}_{3}{ } ; \ldots ; \mathrm{v}_{1}{ }^{\mathrm{m}}, \mathrm{v}_{2}{ }^{\mathrm{m}}, \mathrm{v}_{3}{ }^{ }\right\}
$$

and

$$
E\left(m K_{3,3}\right)=\left\{u_{i}^{r} v_{j}^{r}: 1 \leq i \leq 3,1 \leq j \leq 3 ; 1 \leq r \leq m\right\}
$$

Define $\mathrm{f}: \mathrm{E}\left(\mathrm{mK}_{3,3}\right) \rightarrow\{1,2,3, \ldots, 9 \mathrm{~m}\}$ as follows:

$$
\begin{aligned}
& \mathrm{f}\left(\mathrm{u}_{1}{ }^{\mathrm{r}} \mathrm{v}_{\mathrm{r}}\right)=9(\mathrm{r}-1)+\mathrm{j}, 1 \leq \mathrm{j} \leq 3,1 \leq \mathrm{r} \leq \mathrm{m} ; \\
& \mathrm{f}\left(\mathrm{u}_{2} \mathrm{r}_{\mathrm{j}}{ }^{\mathrm{r}}\right)=9 \mathrm{r}-(\mathrm{j}+2), 1 \leq \mathrm{j} \leq 3,1 \leq \mathrm{r} \leq \mathrm{m} ; \\
& \mathrm{f}\left(\mathrm{u}_{3}{ }^{\mathrm{r}} \mathrm{v}_{\mathrm{j}}{ }^{\mathrm{r}}\right)=9 \mathrm{r}-(\mathrm{j}-1), 1 \leq \mathrm{j} \leq 3,1 \leq \mathrm{r} \leq \mathrm{m} .
\end{aligned}
$$

Consider the vertex $\mathrm{u}_{1}{ }^{\mathrm{r}}$. Clearly,

$$
\begin{aligned}
& \operatorname{gcd}\left(\left(f\left(\mathrm{u}_{1}{ }^{\mathrm{r}} \mathrm{v}_{\mathrm{j}}^{\mathrm{r}}\right), 1 \leq \mathrm{j} \leq 3,1 \leq \mathrm{r} \leq \mathrm{m}\right)\right) \\
& \quad=\operatorname{gcd}(9(\mathrm{r}-1)+\mathrm{j}, 1 \leq \mathrm{j} \leq 3,1 \leq \mathrm{r} \leq \mathrm{m}) \\
& \\
& \quad=1
\end{aligned}
$$

Similarly one can check for the remaining vertices $u_{2}{ }^{r}, u_{3}{ }^{r}, v_{1}{ }^{r}, v_{2}{ }^{r}$ and $v_{3}{ }^{r}$.
Thus f is a vertex prime labeling of $\mathrm{mK}_{3,3}$.
Hence $\mathrm{mK}_{3,3}$ is a vertex prime graph.
For example, a vertex prime labeling of $8 \mathrm{~K}_{3,3}$ is shown in Figure 2.

## Vol. 3, Issue 9, September 2014

Figure 2

## Theorem 2 For any positive integer m , the graph $\mathrm{mK}_{4,4}$ is a vertex prime graph.

## Proof

$$
\text { Let } V\left(\mathrm{mK}_{4,4}\right)=\left\{\mathrm{u}_{1}{ }^{1}, \mathrm{u}_{2}{ }^{1}, \mathrm{u}_{3}{ }^{1}, \mathrm{u}_{4}{ }^{1} ; \mathrm{u}_{1}{ }^{2}, \mathrm{u}_{2}{ }^{2}, \mathrm{u}_{3}{ }^{2}, \mathrm{u}_{4}{ }^{2} ; \ldots ; \mathrm{u}_{1}{ }^{\mathrm{m}}, \mathrm{u}_{2}{ }^{\mathrm{m}}, \mathrm{u}_{3}{ }^{\mathrm{m}}, \mathrm{u}_{4}{ }^{\mathrm{m}} ; \quad \mathrm{v}_{1}{ }^{1}, \mathrm{v}_{2}{ }^{1}, \mathrm{v}_{3}{ }^{1}, \mathrm{v}_{4}{ }^{1} ; \mathrm{v}_{1}{ }^{2}, \mathrm{v}_{2}{ }^{2}, \mathrm{v}_{3}{ }^{2}, \mathrm{v}_{4}{ }^{2} ;\right.
$$

$$
\left.\ldots ; \mathrm{v}_{1}{ }^{\mathrm{m}}, \mathrm{v}_{2}{ }^{\mathrm{m}}, \mathrm{v}_{3}{ }^{\mathrm{m}}, \mathrm{v}_{4}{ }^{\mathrm{m}}\right\}
$$

and

$$
\mathrm{E}\left(\mathrm{mK}_{4,4}\right)=\left\{\mathrm{u}_{\mathrm{i}}^{\mathrm{r}} \mathrm{v}_{\mathrm{j}}^{\mathrm{r}}: 1 \leq \mathrm{i} \leq 4,1 \leq \mathrm{j} \leq 4 ; 1 \leq \mathrm{r} \leq \mathrm{m}\right\}
$$

Define $\mathrm{f}: \mathrm{E}\left(\mathrm{mK}_{4,4}\right) \rightarrow\{1,2,3, \ldots, 16 \mathrm{~m}\}$ as follows:

$$
\begin{aligned}
& \mathrm{f}\left(\mathrm{u}_{1} \mathrm{r}_{\mathrm{r}}^{\mathrm{r}}\right)=16(\mathrm{r}-1)+\mathrm{j}, 1 \leq \mathrm{j} \leq 4,1 \leq \mathrm{r} \leq \mathrm{m} ; \\
& \mathrm{f}\left(\mathrm{u}_{2}{ }^{\mathrm{r}} \mathrm{v}_{\mathrm{j}}^{\mathrm{r}}\right)=16 \mathrm{r}-(\mathrm{j}+7), 1 \leq \mathrm{j} \leq 4,1 \leq \mathrm{r} \leq \mathrm{m} ; \\
& \mathrm{f}\left(\mathrm{u}_{3}{ }^{\mathrm{r}} \mathrm{v}_{\mathrm{j}}^{\mathrm{r}}\right)=16 \mathrm{r}-(\mathrm{j}+3), 1 \leq \mathrm{j} \leq 4,1 \leq \mathrm{r} \leq \mathrm{m} ; \\
& \mathrm{f}\left(\mathrm{u}_{4} \mathrm{r}_{\mathrm{r}}^{\mathrm{r}}\right)=16 \mathrm{r}-(\mathrm{j}-1), 1 \leq \mathrm{j} \leq 4,1 \leq \mathrm{r} \leq \mathrm{m}
\end{aligned}
$$

Consider the vertex $u_{3}{ }^{\mathrm{r}}$. Clearly,
$\operatorname{gcd}\left(\left(\mathrm{f}\left(\mathrm{u}_{3}{ }^{\mathrm{r}} \mathrm{v}_{\mathrm{j}}^{\mathrm{r}}\right), 1 \leq \mathrm{j} \leq 4,1 \leq \mathrm{r} \leq \mathrm{m}\right)\right)$
$=\operatorname{gcd}(16 r-(j+3), 1 \leq j \leq 4,1 \leq r \leq m)$
$=1$
Similarly one can check for the remaining vertices $u_{1}{ }^{\mathrm{r}}, \mathrm{u}_{2}{ }^{\mathrm{r}}, \mathrm{u}_{4}{ }^{\mathrm{r}}, \mathrm{v}_{1}{ }^{\mathrm{r}}, \mathrm{v}_{2}{ }^{\mathrm{r}}, \mathrm{v}_{3}{ }^{\mathrm{r}}$ and $\mathrm{v}_{4}{ }^{\mathrm{r}}$.
Thus $f$ is a vertex prime labeling of $\mathrm{mK}_{4,4}$.
Hence $\mathrm{mK}_{4,4}$ is a vertex prime graph.
For example, a vertex prime labeling of $14 \mathrm{~K}_{4,4}$ is shown in Figure 3.

V.CONCLUSION

In this paper, we present Vertex prime labeling if its edges can be labeled with distinct integers. Thus we prove that $\mathrm{mK}_{3,3}$ and $\mathrm{mK}_{4,4}$ are vertex prime graphs. Some known graphs and unknown graphs are illustrated in a simple manner.
