# Square Graceful Labeling of Some Graphs 

K.Murugan<br>Assistant Professor, Department of Mathematics, The M.D.T. Hindu College, Tirunelveli, Tamilnadu, India

#### Abstract

A}(p . q)\) graph $\mathrm{G}=(V, E)$ is said to be a square graceful graph ifthere exists an injective function $f$ : $\mathrm{V}(G) \rightarrow\left\{0,1,2,3, \ldots, q^{2}\right\}$ such that the induced mapping $f_{p}: \mathrm{E}(G) \rightarrow\left\{1,4,9, \ldots, q^{2}\right\}$ defined by $f_{p}(u v)=|f(u)-f(v)|$ is an injection. The function $f$ is called a square graceful labeling of G . In this paper the square graceful labeling of the caterpillar $S\left(X_{1}, X_{2}, \ldots, X_{n}\right)$, the graphs $P_{n-1}(1,2, \ldots n), \mathrm{m} K_{1, n} \cup s K_{1, t}, \cup_{i=1}^{n} K_{1, i}, P_{n} \odot K_{1}-e, \mathrm{H}$ graph and some other graphsare studied. A new parameter called star square graceful deficiency number of a graph is defined and the star square graceful deficiency number of the cycle $C_{3}$ is determined. Two new definitions namely, odd square graceful labeling and even square graceful labeling of a graph are defined with example.

KEYWORDS: Square graceful graph, odd square graceful graph, even square graceful graph, Star square graceful deficiency number of a graph

## I.INTRODUCTION

The graphs considered in this paper are finite, undirected and without loops or multiple edges. Let $G=(V, E)$ be a graph with $p$ vertices and $q$ edges. Terms not defined here are used in the sense of Harary[2].For number theoretic terminology [1] is followed.

A graph labeling is an assignment of integers to the vertices or edges or both subject to certain conditions. If the domain of the mapping is the set of vertices (edges / both) then the labeling is called a vertex (edge / Total) labeling. There are several types of graph labeling and a detailed survey is found in [4].

Rosa [6] introduced $\beta$-valuation of a graph and Golomb [5] called it as graceful labeling. Several authors worked on graceful labeling, odd graceful labeling, even graceful labeling, super graceful labeling and skolem -graceful labeling.

Recently the concept of square graceful labeling was introduced by T.Tharmaraj and P.B.Sarasija inthe year 2014.They studied the square graceful labeling of various graphs in [7, 8].

The following definitions are necessary for the present study.

### 1.1 Definition

The path on n vertices is denoted by $P_{n}$.

### 1.2 Definition [8]

A complete bipartite graph $K_{1, n}$ is called a star and it has $\mathrm{n}+1$ vertices and n edges

### 1.3Definition

The Corona $G_{1} \odot G_{2}$ of two graphs $G_{1}$ and $G_{2}$ is defined as the graph $G$ by taking one copy of $G_{1}$ (which has $p_{1}$ points) and $p_{1}$ copies of $G_{2}$ and then joining the $\mathrm{i}^{\text {th }}$ point of $G_{1}$ to every point in the $\mathrm{i}^{\text {th }}$ copy of $G_{2}$.

### 1.4Definition

Let the graphs $G_{1}$ and $G_{2}$ have disjoint vertex sets $V_{1}$ and $V_{2}$ and edge sets $E_{1}$ and $E_{2}$ respectively. Then their union $G=G_{1} \cup G_{2}$ is a graph with vertex set $V=V_{1} \cup V_{2}$ and edge set $E=E_{1} \cup E_{2}$. Clearly $G_{1} \cup G_{2}$ has $p_{1}+p_{2}$ vertices and $q_{1}+q_{2}$ edges.

# International Journal of Innovative Research in Science, Engineering and Technology 

(An ISO 3297: 2007 Certified Organization)

## Vol. 4, Issue 2, February 2015

### 1.5 Definition

The graph $P_{m} @ P_{n}$ is obtained from $P_{m}$ and m copies of $P_{n}$ by identifying one pendant vertex of the $i^{t h}$ copy of $P_{n}$ with $i^{t h}$ vertex of $P_{m}$ where $P_{m}$ is a path of length $\mathrm{m}-1$.

## II.SQUARE GRACEFUL GRAPHS

### 2.1 Definition[7]

A $(p . q)$ graph $G=(V, E)$ is said to be a square graceful graph if there exists an injective function $f: \mathrm{V}(G) \rightarrow$ $\left\{0,1,2,3, \ldots, q^{2}\right\}$ such that the induced mapping $f_{p}: \mathrm{E}(G) \rightarrow\left\{1,4,9, \ldots, q^{2}\right\}$ defined by $f_{p}(u v)=|f(u)-f(v)|$ is an injection. The function $f$ is called a square graceful labeling of $G$.

### 2.2 Example

The square graceful labeling of the kite graph is given in figure a

Figure a

### 2.3 Observation

The cycles $C_{3}$ and $C_{4}$ are not square graceful graphs.

### 2.4SOME KNOWN RESULTS [7]

### 2.4.1 Theorem

The star $K_{1, n}$ is square graceful for all n

### 2.4.2 Theorem

The graph obtained by the subdivision of the edges of the star $K_{1, n}$ is a square graceful graph

### 2.4.3 Theorem

Every path $P_{n}$ is a square graceful graph.

### 2.4.4 Theorem

The graph $P_{n} \odot n K_{1}, \mathrm{n} \geq 2$ is a square graceful graph.

### 2.4.5 Corollary

The comb $P_{n} \odot K_{1}$ is a square graceful graph.

## III.MAIN RESULTS

### 3.1. Definition

Let $X_{i} \in N$. Then the cater pillar $\mathrm{S}\left(X_{1}, X_{2}, \ldots, X_{n}\right)$ is obtained from the path $P_{n}$ by joining $X_{i}$ vertices to each of the $i^{\text {th }}$ vertex of $P_{n}(1 \leq i \leq n)$

# International Journal of Innovative Research in Science, Engineering and Technology 

## (An ISO 3297: 2007 Certified Organization)

## Vol. 4, Issue 2, February 2015

### 3.2 Theorem

The caterpillar $\mathrm{S}\left(X_{1}, X_{2}, \ldots, X_{n}\right)$ is square graceful for all $n>1$

## Proof

Let $G$ be the caterpillar $\mathrm{S}\left(X_{1}, X_{2}, \ldots, X_{n}\right)$.
Let $V(G)=\left\{v_{i} ; 1 \leq i \leq n\right\} \cup\left\{v_{i j} ; 1 \leq i \leq n, 1 \leq j \leq X_{i}\right\}$ and
$E(G)=\left\{v_{i} v_{i+1} ; 1 \leq i \leq n-1\right\} \cup\left\{v_{i} v_{i j} ; 1 \leq i \leq n, 1 \leq j \leq X_{i}\right\}$
Then $|V(G)|=X_{1}+X_{2}+\cdots+X_{n}+n$ and $|E(G)|=X_{1}+X_{2}+\cdots+X_{n}+n-1$
Let $f: V(G) \rightarrow\left\{0,1,2, \ldots,\left(X_{1}+X_{2}+\cdots+X_{n}+n-1\right)^{2}\right\}$ be defined as follows.
$f\left(v_{i}\right)=\frac{i(i-1)(2 i-1)}{6} ; 1 \leq i \leq n$
$f\left(v_{i j}\right)=\left[X_{1}+X_{2}+\cdots+X_{n}+n-1-(j-1)\right]^{2} ; 1 \leq j \leq X_{1}$
$f\left(v_{1 j}\right)=\left[X_{i}+X_{i+1}+\cdots+X_{n}+n-j\right]^{2}+\frac{i(i-1)(2 i-1)}{6} ; 2 \leq i \leq n, 1 \leq j \leq X_{i}$
Let $f^{*}$ be the induced edge labeling off. Then we have
$f^{*}\left(v_{i} v_{i+1}\right)=i^{2} ; 1 \leq i \leq n-1$
$f^{*}\left(v_{i} v_{i j}\right)=\left[X_{i}+X_{i+1}+\cdots+X_{n}+n-j\right]^{2} ; 1 \leq i \leq n, 1 \leq j \leq X_{i}$
The induced edge labels are distinct and are $1^{2}, 2^{2}, 3^{2}, \ldots,\left[X_{1}+X_{2}+\cdots+X_{n}+n-1\right]^{2}$. Hence the theorem.

### 3.3 Definition[5]

The graph $P_{n-1}(1,2,3, \ldots, n)$ is a graph obtained from a path of vertices $v_{1}, v_{2}, \ldots, v_{n}$ having the path length $n$-lby joining $i$ pendant vertices at each of its vertices.

### 3.4 Corollary

The graph $P_{n-1}(1,2,3, \ldots, n)$ is square graceful for all $n>2$

### 3.5 Corollary

Theorem 2.4.4 and corollary 2.4.5 follows immediately from theorem 3.2

### 3.6Theorem

The graph $P_{n} \odot K_{1}-e$ is square graceful for all $n>1$.

## Proof

Let $G$ be the graph $P_{n} \odot K_{1}-e$.
Let $V(G)=\left\{v_{i}, u_{j} ; 1 \leq i \leq \mathrm{n}, 1 \leq \mathrm{j} \leq \mathrm{n}-1\right\}$ and
$\mathrm{E}(G)=\left\{v_{i} v_{i+1}, v_{j} u_{j} ; 1 \leq i \leq n-1,1 \leq j \leq n-1\right\}$
Then $|V(G)|=2 \mathrm{n}-1$ and $|E(G)|=2 \mathrm{n}-2$
Let $f: V(G) \rightarrow\left\{0,1,2, \ldots,(2 n-2)^{2}\right\}$ be defined as follows.
$f\left(v_{i}\right)=\frac{i(i-1)(2 i-1)}{6} ; 1 \leq i \leq n$
$f\left(u_{i}\right)=[2 n-1-i]^{2}+\frac{i(i-1)(2 i-1)}{6} ; 1 \leq i \leq n-1$
Let $f^{*}$ be the induced edge labeling of $f$. Then
$f^{*}\left(v_{i} v_{i+1}\right)=i^{2} ; 1 \leq i \leq n-1$ and
$f^{*}\left(v_{j} u_{j}\right)=(2 n-1-j)^{2} ; 1 \leq j \leq n-1$
The induced edge labels are distinct and are $1^{2}, 2^{2}, 3^{2}, \ldots,(2 n-2)^{2}$. Hence the theorem.

### 3.7 Theorem

Let $P_{n}$ be the path on n vertices. Then the twig graph $G$ obtained from the path $P_{n}$ by attaching exactly two pendant edges to each internal vertex of the path is square graceful.

## Proof

Let G be the twig graph.
Let $\mathrm{V}(G)=\left\{v_{i}, u_{j}, w_{j} ; 1 \leq i \leq n, 2 \leq j \leq n-1\right\}$ and

# International Journal of Innovative Research in Science, Engineering and Technology 

## (An ISO 3297: 2007 Certified Organization)

## Vol. 4, Issue 2, February 2015

$\mathrm{E}(G)=\left\{v_{i} v_{i+1}, v_{j} u_{j}, v_{j} w_{j} ; 1 \leq i \leq n-1,2 \leq j \leq n-1\right\}$
Then $|V(G)|=3 n-4$ and $|E(G)|=3 n-5$
Let $f: V(G) \rightarrow\left\{0,1,2,3, \ldots,(3 n-5)^{2}\right\}$ be defined as follows.
$f\left(v_{1}\right)=0$
$f\left(v_{i}\right)=\sum_{j=2}^{i}(-1)^{j}(3 n-3-j)^{2} ; 2 \leq i \leq n$
$f\left(u_{i}\right)=f\left(v_{i}\right)+(-1)^{1+i}(2 n-2 i)^{2} ; 2 \leq i \leq n-1$
$f\left(w_{i}\right)=f\left(v_{i}\right)+(-1)^{1+i}(2 n-1-2 i)^{2} ; 2 \leq i \leq n-1$
Let $f^{*}$ be the induced edge labeling of $f$. Then
$f^{*}\left(v_{i} v_{i+1}\right)=(3 n-4-i)^{2} ; 1 \leq i \leq n-1$
$f^{*}\left(v_{i} u_{i}\right)=(2 n-2 i)^{2} ; 2 \leq i \leq n-1$
$f^{*}\left(v_{i} w_{i}\right)=(2 n-1-2 i)^{2} ; 2 \leq i \leq n-1$
The induced edge labels are distinct and are $1^{2}, 2^{2}, 3^{2}, \ldots,(3 n-5)^{2}$.Hence the theorem.

### 3.8 Theorem

The graph $P_{n} @ P_{m}$ is square graceful for all $n, m \geq 2$.

## Proof

Let $G$ be the given graph.
Let $V(G)=\left\{v_{i}, v_{i j} ; 1 \leq i \leq n, 2 \leq j \leq m\right\}$ and
$E(G)=\left\{v_{i} v_{i+1}, v_{j} v_{j 2}, v_{k l} v_{k l+1} ; 1 \leq i \leq n-1,1 \leq j \leq n, 1 \leq k \leq n, 2 \leq l \leq m\right\}$
Then $|\mathrm{V}(G)|=n m$ and $|\mathrm{E}(G)|=n m-1$
Let $f: \mathrm{V}(G) \rightarrow\left\{0,1,2, \ldots,(n m-1)^{2}\right\}$ be defined as follows.
$f\left(v_{l}\right)=0$
$f\left(v_{i}\right)=\sum_{j=2}^{i}(-1)^{j}[n m-(j-1)]^{2} ; \quad 2 \leq i \leq n$
$f\left(v_{1 j}\right)=\sum_{i=2}^{j}(-1)^{i}[n m-n-(i-2)]^{2} ; 2 \leq j \leq m$
$f\left(v_{i j}\right)=f\left(v_{i}\right)+\sum_{k=2}^{j}(-1)^{k}\{[n-(i-1)](m-1)-(k-2)\}^{2} ; 2 \leq i \leq n, 2 \leq j \leq m i f i$ is odd

$$
=f\left(v_{i}\right)+\sum_{k=2}^{j}(-1)^{k+1}\{[n-(i-1)](m-1)-(k-2)\}^{2} ; 2 \leq i \leq n, 2 \leq j \leq \text { mifüis even }
$$

Let $f^{*}$ be the induced edge labeling of $f$. Then
$f^{*}\left(v_{i} v_{i+1}\right)=(n m-i)^{2} ; \quad l \leq i \leq n-1$
$f^{*}\left(v_{j} v_{j 2}\right)=[n m-n+3-(m-1) j]^{2} ; \quad 1 \leq j \leq n$
$f^{*}\left(v_{k l} v_{k l+1}\right)=(n m-n+m-l-3 k)^{2} ; \quad 2 \leq l \leq m-1, l \leq k \leq n-1$
The induced edge labels are distinct and are $1^{2}, 2^{2}, 3^{2}, \ldots,(n m-1)^{2}$.Hence the theorem.

### 3.9 Definition[9]

The H-graph of a path $P_{n}$ is the graph obtained from two copies of $P_{n}$ with vertices $v_{1}, v_{2} \ldots v_{n}$ and $u_{1}, u_{2} \ldots u_{n}$ by joining the vertices $v_{\frac{n+1}{2}}$ and $\frac{u_{\frac{n+1}{2}}}{}$ if n is odd and the vertices $v_{\frac{n}{2}+1}$ and $u_{\frac{n}{2}}$ if n is even.

### 3.10 Theorem

The H-graph G is square graceful for all $\mathrm{n}>2$.

## Proof

Let $\mathrm{V}(G)=\left\{v_{i}, u_{i} ; 1 \leq i \leq n\right\}$ and
$\mathrm{E}(G)=\left\{v_{i} v_{i+1}, u_{i} u_{i+1}, v_{\frac{n+1}{2}} u_{\frac{n+1}{2}}\right.$ if $n$ is odd $v_{\frac{n}{2}} u_{\frac{n}{2}+1}$ if $n$ is even; $\left.1 \leq i \leq n-1\right\}$
Then $|V(G)|=2 n$ and $|\mathrm{E}(G)|=2 n-1$
Let $f: \mathrm{V}(G) \rightarrow\left\{0,1,2, \ldots,(2 n-1)^{2}\right\}$ be defined as follows.
Case (i): when n is odd
$f\left(v_{1}\right)=0$

$f\left(u_{\frac{n}{2}+1+j}\right)=f\left(u_{\frac{n}{2}+1}\right)+\sum_{i=1}^{j}(-1)^{i+1}\left[\frac{n}{2}-i\right]^{2} ; 1 \leq j \leq \frac{n}{2}-1$
Let $f^{*}$ be the induced edge labeling of $f$. Then
$f^{*}\left(v_{i} v_{i+1}\right)=(2 n-i)^{2} ; 1 \leq i \leq n-1$
$f^{*}\left(v_{\frac{n+1}{2}} u_{\frac{n+1}{2}}\right)=n^{2}$
$f^{*}\left(u_{i} u_{i+1}\right)=(n-i)^{2} ; 1 \leq i \leq n-1$
The induced edge labels are distinct and are $1^{2}, 2^{2}, 3^{2}, \ldots,(2 n-1)^{2}$.Hence the theorem.

### 3.11 Theorem

Let $G$ be a graph with fixed vertex $v$ and let $\left(P_{m}: G\right)$ be the graph obtained from m copies of $G$ and the path $P_{m}: u_{1}, u_{2 \ldots} u_{m}$ by joining $u_{i}$ with the vertex $v$ of the $\mathrm{i}^{\text {th }}$ copy of $G$ by means of an edge, for $1 \leq i \leq n$. Then G is square graceful

## Proof

Let G be the given graph.
Let $\mathrm{V}(G)=\left\{v_{i}, u_{i} ; 1 \leq i \leq n\right\}$ and
$\mathrm{E}(G)=\left\{v_{i} v_{i+1}, u_{i} u_{i+1}, v_{2} u_{2} ; 1 \leq i \leq n-1\right\}$
Then $|\mathrm{V}(G)|=2 n$ and $|\mathrm{E}(G)|=2 n-1$
Let $f: \mathrm{V}(G) \rightarrow\left\{0,1,2, \ldots,(2 n-1)^{2}\right\}$ be defined as follows.
$f\left(v_{1}\right)=0$
$f\left(v_{i}\right)=\sum_{j=1}^{i-1}(-1)^{j+1}[2 n-j]^{2} ; 2 \leq i \leq n$
$f\left(u_{2}\right)=f\left(v_{2}\right)-n^{2}$
$f\left(u_{1}\right)=f\left(v_{2}\right)-n^{2}-(n-1)^{2}$
$f\left(u_{i}\right)=f\left(u_{2}\right)+\sum_{j=3}^{i}(-1)^{j}[n-(j-1)]^{2} ; 3 \leq i \leq n$
Let $f^{*}$ be the induced edge labeling of $f$. Then
$f^{*}\left(v_{i} v_{i+1}\right)=(2 n-i)^{2} ; 1 \leq i \leq n-1$

# International Journal of Innovative Research in Science, Engineering and Technology 

(An ISO 3297: 2007 Certified Organization)

## Vol. 4, Issue 2, February 2015

$f^{*}\left(v_{2} u_{2}\right)=n^{2}$
$f^{*}\left(u_{i} u_{i+1}\right)=(n-i)^{2} ; 1 \leq i \leq n-1$
The induced edge labels are distinct and are $1^{2}, 2^{2}, 3^{2}, \ldots,(2 n-1)^{2}$. Hence the theorem.

### 3.12 Theorem

The graph $m K_{1, n} \cup s K_{1, t}$ is square graceful for $m, n, s, t \geq 1$.
Proof
Let $G$ be the graph $m K_{1, n} \cup s K_{1, t}$
Let $V(G)=\left\{v_{i}, v_{i j}, u_{k}, u_{k l} ; 1 \leq i \leq m, 1 \leq j \leq n, 1 \leq k \leq s, 1 \leq l \leq t\right\}$ and
$E(G)=\left\{v_{i} v_{i j}, u_{k} u_{k l} ; 1 \leq i \leq m, 1 \leq j \leq n, 1 \leq k \leq s, 1 \leq l \leq t\right\}$
Then $|V(G)|=\mathrm{m}(1+n)+s(1+t)$ and $|E(G)|=m n+s t$
Let $f: V(G) \rightarrow\left\{0,1,2, \ldots,(m n+s t)^{2}\right\}$ be defined as follows.
$f\left(v_{i}\right)=i-1 ; 1 \leq i \leq m$
$f\left(v_{1 j}\right)=[m n+s t+1-j]^{2} ; 1 \leq j \leq n$
$f\left(v_{i j}\right)=[m n+s t-(i-1) n+1-j]^{2}+i-1 ; 2 \leq i \leq m, 1 \leq j \leq n$
$f\left(u_{i}\right)=m-1+i ; 1 \leq i \leq s$
$f\left(u_{i j}\right)=[s t-(i-1) t+1-j]^{2}+m-1+i ; 1 \leq i \leq s, 1 \leq j \leq t$
Let $f^{*}$ be the induced edge labeling of $f$. Then
$f^{*}\left(v_{i} v_{i j}\right)=[m n+s t-(i-1) n+1-j]^{2} ; 1 \leq i \leq m, 1 \leq j \leq n$
$f^{*}\left(u_{i} u_{i j}\right)=[s t-(i-1) t+1-j]^{2} ; 1 \leq i \leq s, 1 \leq j \leq t$
The induced edge labels are distinct and are $1^{2}, 2^{2}, 3^{2}, \ldots,(m n+s t)^{2}$. Hence the theorem.

### 3.13 Theorem

The graph $\bigcup_{i=1}^{n} K_{1, i}$ is square graceful for all $n \geq 1$.

## Proof

Let $G$ be the graph $\bigcup_{i=1}^{n} K_{1, i}$.
Let $\mathrm{V}\left(\mathrm{K}_{1, \mathrm{n}}\right)=\left\{\mathrm{u}_{\mathrm{i}}, \mathrm{u}_{\mathrm{ij}} ; 1 \leq \mathrm{i} \leq \mathrm{n}, 1 \leq j \leq \mathrm{i}\right\}$ and
$E\left(K_{1, n}\right)=\left\{u_{i} u_{i j}, 1 \leq i \leq n, 1 \leq j \leq i\right\}$
Then $|V(G)|=\frac{n^{2}+3 n}{2}$ and $|E(G)|=\frac{n(n+1)}{2}$
Let the function $f: V(G) \rightarrow\left\{0,1,2, \ldots\left[\frac{n(n+1)}{2}\right]^{2}\right\}$ be defined as follows.
$f\left(u_{i}\right)=i-1 ; 1 \leq i \leq n$
$f\left(u_{11}\right)=\left[\frac{n(n+1)}{2}\right]^{2}$
$f\left(u_{i j}\right)=\left\{\frac{n(n+1)}{2}-\left[\sum_{k=0}^{i-1} k-j+1\right]\right\}^{2} ; 2 \leq i \leq n, 1 \leq j \leq \mathrm{i}$
Let $f^{*}$ be the induced edge labeling of $f$. Then
$f^{*}\left(\mathrm{u}_{\mathrm{i}} \mathrm{u}_{\mathrm{ij}}\right)=\left[\frac{n(n+1)}{2}-\left[\sum_{k=0}^{i-1} k+j-1\right]\right]^{2} ; 1 \leq i \leq \mathrm{n}, 1 \leq \mathrm{j} \leq \mathrm{i}$
The induced edge labels are distinct and are $1^{2}, 2^{2}, 3^{2}, \ldots,\left[\frac{n(n+1)}{2}\right]^{2}$.Hence the graph $\bigcup_{i=1}^{n} K_{1, i}$ is square graceful for all $n \geq 1$.

### 3.14Theorem

Let $G_{i}=K_{1, n}$ for $l \leq i \leq m$ with vertex set $V\left(G_{i}\right)=\left\{v_{i}, v_{i j} ; 1 \leq j \leq n\right\}$. Let $G$ be the graph obtained by identifying $v_{i n}$ with $v_{(i+1) 1}$ for $1 \leq i \leq m-1$ then $G$ is square graceful for all $n$ and $m$.

## Proof

Let G be the given graph.
Let $\mathrm{V}(G)=\left\{v_{i}, v_{i j} ; 1 \leq i \leq m, 1 \leq j \leq n\right\}$ and $\mathrm{E}(G)=\left\{v_{i} v_{i j} ; 1 \leq i \leq m, 1 \leq j \leq n\right\}$

# International Journal of Innovative Research in Science, Engineering and Technology 

## (An ISO 3297: 2007 Certified Organization)

## Vol. 4, Issue 2, February 2015

Then $|V(G)|=\mathrm{nm}+1$ and $|E(G)|=\mathrm{nm}$
Let $f: \mathrm{V}(G) \rightarrow\left\{0,1,2, \ldots(n m)^{2}\right\}$ be defined as follows.
$f\left(v_{1}\right)=0$
$f\left(v_{i}\right)=f\left(v_{(i-1) n}\right)-\{[m-(i-1)] n\}^{2} ; 2 \leq i \leq n$
$f\left(v_{1 j}\right)=[n m-(j-1)]^{2} ; 1 \leq j \leq n$
$f\left(v_{i j}\right)=f\left(v_{i}\right)+\{[m-(i-1)] n-(j-1)\}^{2} ; 2 \leq j \leq n, 2 \leq i \leq m$
Let $f^{*}$ be the induced edge labeling of $f$. Then
$f^{*}\left(v_{i} v_{i j}\right)=\{n m-(i-1) n+1-j\}^{2} ; 1 \leq i \leq m, 1 \leq j \leq n$
The induced edge labels are distinct and are $1^{2}, 2^{2}, 3^{2}, \ldots,(n m)^{2}$.Hence the theorem.

### 3.15 Theorem

The graph $<K_{1, m}, K_{1, n}, K_{1, s}, K_{1, t}>$ obtained by joining the central vertices of $K_{1, m}, K_{1, n}, K_{1, s}$ and $K_{1, t}$ to a new vertex is square graceful for all $m, n, s, t \geq 1$

## Proof

Let G be the graph $<K_{1, m}, K_{1, n}, K_{1, s}, K_{1, t}>$.
Let $\mathrm{V}(G)=\left\{\begin{array}{r}v, v_{l}, v_{1 i}, v_{2 j}, v_{3 k}, v_{4 z} ; 1 \leq l \leq 4,1 \leq i \leq m, 1 \leq j \leq n, 1 \leq k \leq s, \\ 1 \leq z \leq t\end{array}\right\}$ and
$\mathrm{E}(G)=\left\{\begin{array}{r}v v_{l}, v_{1} v_{1 i}, v_{2} v_{2 j}, v_{3} v_{3 k}, v_{4} v_{4 z} ; 1 \leq l \leq 4,1 \leq i \leq m, 1 \leq j \leq n, 1 \leq k \leq s, \\ 1 \leq z \leq t\end{array}\right\}$
Then $|\mathrm{V}(G)|=m+n+s+t+5$ and $|\mathrm{E}(G)|=m+n+s+t+4$
Let $f: \mathrm{V}(G) \rightarrow\left\{0,1,2, \ldots,(m+n+s+t+4)^{2}\right\}$ be defined as follows.
$f(v)=0$
$f\left(v_{l}\right)=(m+n+s+t+5-l)^{2} ; \quad l \leq l \leq 4$
$f\left(v_{1 i}\right)=(m+n+s+t+4)^{2}-(m+n+s+t-(i-1))^{2} ; \quad 1 \leq i \leq m$
$f\left(v_{2 j}\right)=(m+n+s+t+3)^{2}-(n+s+t-(j-1))^{2} ; \quad 1 \leq j \leq n$
$f\left(v_{3 k}\right)=(m+n+s+t+2)^{2}-(s+t-(k-1))^{2} ; \quad 1 \leq k \leq s$
$f\left(v_{4 z}\right)=(m+n+s+t+1)^{2}-(t-(z-1))^{2} ; \quad l \leq z \leq t$
Let $f^{*}$ be the induced edge labeling of $f$. Then
$f^{*}\left(v v_{l}\right)=(m+n+s+t+5-l)^{2} ; \quad l \leq l \leq 4$
$f^{*}\left(v_{1} v_{1 i}\right)=(m+n+s+t+1-i)^{2} ; \quad l \leq i \leq m$
$f^{*}\left(v_{2} v_{2 j}\right)=(n+s+t+1-j)^{2} ; 1 \leq j \leq n$
$f^{*}\left(v_{3} v_{3 k}\right)=(s+t+1-k)^{2} ; \quad l \leq k \leq s$
$f^{*}\left(v_{4} v_{4 z}\right)=(t+1-z)^{2} ; 1 \leq z \leq t$
The induced edge labels are distinct and are $1^{2}, 2^{2}, 3^{2}, \ldots,(m+n+s+t+4)^{2}$.Hence the theorem.

### 3.16 Theorem

Let G be the graph obtained by identifying the pendant vertices of $K_{1, m}$ by $K_{1, n}$. Then G is square graceful for all $m, n \geq 1$

## Proof

Let $\mathrm{V}(G)=\left\{v, v_{i}, u_{i j} ; 1 \leq i \leq m, 1 \leq j \leq n\right\}$ and
$\mathrm{E}(G)=\left\{v v_{i}, v_{i} u_{i j} ; 1 \leq i \leq m, 1 \leq j \leq n\right\}$
Then $|\mathrm{V}(G)|=m+m n+1$ and $|\mathrm{E}(G)|=m+m n$
Let $f: \mathrm{V}(G) \rightarrow\left\{0,1,2, \ldots,(m+m n)^{2}\right\}$ be defined as follows.
$f(v)=0$
$f\left(v_{i}\right)=[m+m n-(i-1)]^{2} ; 1 \leq i \leq m$
$f\left(u_{i j}\right)=[m+m n-(i-1)]^{2}-[(i-1) n+j]^{2} ; 1 \leq i \leq m, 1 \leq j \leq n$
Let $f^{*}$ be the induced edge labeling of $f$. Then

# International Journal of Innovative Research in Science, Engineering and Technology

## Vol. 4, Issue 2, February 2015

$f^{*}\left(v v_{i}\right)=[m n+m+1-i]^{2} ; 1 \leq i \leq m$
$f^{*}\left(v_{i} u_{i j}\right)=[(i-1) n+j]^{2} ; 1 \leq i \leq m, 1 \leq j \leq n$
The induced edge labels are distinct and are $1^{2}, 2^{2}, 3^{2}, \ldots,(m+m n)^{2}$. Hence the theorem.

### 3.17 Theorem

The graph $K_{1, m} \odot K_{1, n}$ is square graceful for all $\mathrm{m}, \mathrm{n} \geq 1$.

## Proof

Let G be the $\operatorname{graph} K_{1, m} \odot K_{1, n}$.
Let $\mathrm{V}(G)=\left\{v, v_{i}, u_{i j}, w_{j} ; 1 \leq i \leq m, 1 \leq j \leq n\right\}$ and
$\mathrm{E}(G)=\left\{v v_{i}, v_{i} u_{i j}, v w_{j} ; 1 \leq i \leq m, 1 \leq j \leq n\right\}$
Then $|V(G)|=m+n+m n+1$ and $|E(G)|=m+n+m n$
Let $f: V(G) \rightarrow\left\{0,1,2, \ldots,(m+n+m n)^{2}\right\}$ be defined as follows.
$f(v)=0$
$f\left(w_{j}\right)=[m+n+m n-(j-1)]^{2} ; 1 \leq j \leq n$
$f\left(v_{i}\right)=[m+m n-(i-1)]^{2} ; 1 \leq i \leq m$
$f\left(u_{i j}\right)=[m+m n-(i-1)]^{2}-[(i-1) n+j]^{2} ; 1 \leq i \leq m, 1 \leq j \leq n$
Let $f^{*}$ be the induced edge labeling of $f$. Then
$f^{*}\left(v w_{j}\right)=[m+n+m n+1-j]^{2} ; 1 \leq j \leq n$
$f^{*}\left(v v_{i}\right)=[m+m n+1-i]^{2} ; 1 \leq i \leq m$
$f^{*}\left(v_{i} u_{i j}\right)=[(i-1) n+j]^{2} ; 1 \leq i \leq m, 1 \leq j \leq n$
The induced edge labels are distinct and are $1^{2}, 2^{2}, 3^{2}, \ldots,(m+n+m n)^{2}$. Hence the theorem.

### 3.18Definition

The coconut tree graph is obtained by identifying the central vertex of $K_{1, n}$ with a pendant vertex of the path $P_{m}$.

### 3.19 Theorem

The coconut tree graph is square graceful for all $\mathrm{n} \geq 1$ and $\mathrm{m}>1$.

## Proof

Let G be the coconut tree graph.
Let $\mathrm{V}(G)=\left\{v, v_{i}, u_{j} ; 1 \leq i \leq n, 2 \leq j \leq m\right\}$ and
$\mathrm{E}(G)=\left\{v v_{i}, v u_{2}, u_{j} u_{j+1} ; 1 \leq i \leq n, 2 \leq j \leq m-1\right\}$
Then $|\mathrm{V}(G)|=n+m$ and $|\mathrm{E}(G)|=n+m-1$
Let $f: \mathrm{V}(G) \rightarrow\left\{0,1,2, \ldots,(n+m-1)^{2}\right\}$ be defined as follows.
$f(v)=0$
$f\left(v_{i}\right)=(n+m-i)^{2} ; 1 \leq i \leq n$
$f\left(u_{2}\right)=(m-1)^{2}$
$f\left(u_{i}\right)=\sum_{j=2}^{i}(-1)^{j}[m-(j-1)]^{2} ; 3 \leq i \leq m$
Let $f^{*}$ be the induced edge labeling of $f$. Then
$f^{*}\left(v v_{i}\right)=(n+m-i)^{2} ; 1 \leq i \leq n$
$f^{*}\left(v u_{2}\right)=(m-1)^{2}$
$f^{*}\left(u_{j} u_{j+1}\right)=(m-j)^{2} ; 2 \leq j \leq m-1$
The induced edge labels are distinct and are $1^{2}, 2^{2}, 3^{2}, \ldots,(n+m-1)^{2}$.Hence the theorem.

### 3.20 Definition

Let $\mathrm{G}=(V, E)$ be a graph with p vertices $v_{1}, v_{2}, \ldots, v_{p}$. In G , every vertex $v_{i}$ is identified to the central vertex of the star $S_{m_{i}}$ for some $m_{i} \geq 0,1 \leq i \leq n$ where $S_{0}=K_{1}$ and this graph is denoted by G $\left(m_{1}, m_{2}, \ldots, m_{p}\right)$.
Let $\mathrm{M}(G)=\left\{\left(m_{1}, m_{2}, \ldots, m_{p}\right) ; G\left(m_{1}, m_{2}, \ldots, m_{p}\right)\right.$ is a square graceful graph $\}$. The star square graceful deficiency number of the graph G, denoted by $S_{\mu}(G)$ is defined as

## Vol. 4, Issue 2, February 2015

$S_{\mu}(G)=\left\{\begin{array}{l}\min \left(m_{1}+m_{2}+\cdots+m_{p}\right) \operatorname{ifM}(G) \neq \emptyset \\ \infty \\ \text { ifM }(G)=\emptyset\end{array}\right\}$

### 3.21Example

The star square graceful deficiency number of the cycle $C_{3}(2,0,0)$ is given in figureb .

Figure b
$S_{\mu}\left(C_{3}\right)=2$

### 3.22Definition

A $(p . q)$ graph $\mathrm{G}=(V, E)$ is said to be an odd square graceful graph if there exists an injective function $f: \mathrm{V}(G) \rightarrow$ $\left\{0,1,2,3, \ldots .(2 q-1)^{2}\right\}$ such that the induced mapping $f_{p}: \mathrm{E}(G) \rightarrow\left\{1,9,25, \ldots(2 q-1)^{2}\right\}$ defined by $f_{p}(u v)=$ $|f(u)-f(v)|$ is an injection. The function $f$ is called an odd square graceful labeling of G.

### 3.23Example

The odd graceful labeling of the path $P_{4}$ is given in figure c.

## Figure c

### 3.24Definition

A $(p . q)$ graph $\mathrm{G}=(V, E)$ is said to be an even square graceful graph if there exists an injective function $f: \mathrm{V}(G) \rightarrow$ $\left\{0,1,2,3, \ldots(2 q)^{2}\right\}$ such that the induced mapping $f_{p}: \mathrm{E}(G) \rightarrow\left\{4,16,36, \ldots(2 q)^{2}\right\}$ defined by $f_{p}(u v)=|f(u)-f(v)|$ is an injection. The function $f$ is called an even square graceful labeling of G .

### 3.25Example

The even graceful labeling of the path $P_{4}$ is given in figure d .

Figure d

## IV.CONCLUSION

In this paper, the square graceful labeling of some graphs is studied. Examples of some non-square graceful graphs are observed. Star square graceful deficiency number of a graph is determined and the Star square graceful deficiency number of the cycle $C_{3}$ is determined. Odd square graceful labeling and even square graceful labeling are introduced.

## SCOPE FOR FURTHER STUDY

The Star square graceful deficiency number of the cycle $C_{n}$ where $\mathrm{n}>3$, the wheel $W_{n}$, where $\mathrm{n}>3$, Odd square graceful labeling and even square graceful labeling of various graphs maybe studied.

## ACKNOWLEDGEMENTS

The author is thankful to the anonymous Reviewer for the valuable comments and suggestions.

## BIOGRAPHY

Dr.K.Murugan is an Assistant Professor in the PG and Research Department of Mathematics, The M.D.T Hindu College, Tirunelveli, Tamilnadu, India. He has been awarded Ph.D degree in Mathematics by the Manonmaniam Sundaranar University, Tirunelveli in 2013. The title of his thesis is 'STUDIES IN GRAPH THEORY-SKOLEM DIFFERENCE MEAN LABELING AND RELATED TOPICS' He has five years of Research experience. His thrust area is Graph labeling and has published 13 research papers. He has participated in more than 50 conferences, presented 15 papers, given five guest lectures and served as a resource person in a seminar.
