# Vertex Prime Labeling of Union of Complete Bipartite Graphs 

Dr. A. Selvam Avadayappan ${ }^{1}$, R. Sinthu ${ }^{2}$<br>Associate Professor, Department of Mathematics, V.H.N.S.N. College, Virudhunagar, Tamil Nadu, India<br>Research Scholar, Department of Mathematics, V.H.N.S.N. College, Virudhunagar, Tamil Nadu, India

#### Abstract

A graph $\mathrm{G}(\mathrm{V}, \mathrm{E})$ is said to have a vertex prime labeling if its edges can be labeled with distinct integers from $\{1,2,3, \ldots,|E|\}$ such that for each vertex of degree at least 2 , the greatest common divisor of the labels on its incident edges is 1 . A graph that admits a vertex prime labeling is called a vertex prime graph.

In this paper, we prove that $\mathrm{mK}_{5,5}, \mathrm{mK}_{6,6}, \mathrm{mK}_{7,7}$ and $\mathrm{mK}_{8,8}$ are vertex prime graphs, where m is any positive integer.

KEYWORDS: labeling of graphs, vertex prime labeling of graphs.
Subject Classification Code (2000): 05C(Primary)

## I. Introduction

Let $\mathrm{G}(\mathrm{V}, \mathrm{E})$ be a graph. For notations and terminology, we follow [1]. G is called a vertex prime graph if there is a bijection $\mathrm{f}: \mathrm{E} \rightarrow\{1,2,3, \ldots,|\mathrm{E}|\}$ such that for any vertex $\mathrm{v}, \operatorname{gcd}\{\mathrm{f}(\mathrm{uv})\}=1$. The bijection f is called a vertex prime labeling of G.

For example, vertex prime labelings of some known graphs are illustrated in Figure 1.

## Vol. 5, Issue 3, March 2016

The concept of vertex prime graphs has been introduced by T. Deretsky, S.M. Lee and J. Mitchem [3] in 1991. They proved that the forests; any connected graph; $C_{2 k} \cup C_{n} ; C_{2 k} \cup C_{2 n} \cup C_{2 k+1} ; C_{2 m} \cup C_{2 n} \cup C_{2 t} \cup C_{k}$; and $5 \mathrm{C}_{2 \mathrm{~m}}$ are vertex prime. They have further proved that a graph with exactly 2 components, one of which is not an odd cycle has a vertex prime labeling and a 2 - regular graph with at least two odd cycles does not have a vertex prime labeling. They have conjectured that a 2 - regular graph has a vertex prime labeling if and only if it does not have two odd cycles. Let $\mathrm{G}=\bigcup_{\mathrm{i}=1}^{\mathrm{t}} \mathrm{C}_{2 \mathrm{n}_{\mathrm{i}}}$ and $\mathrm{N}=\sum_{\mathrm{i}=1}^{\mathrm{t}} \mathrm{n}_{\mathrm{i}}$. In [2], I. Borosh, D. Hensley and A. Hobbs proved that there is a positive constant $\mathrm{n}_{0}$ such that the conjecture of Deretsky et al., is true for the following cases:
i) $G$ is the disjoint union of at most seven cycles, or
ii) G is a union of cycles all of the same even length 2 n if $\mathrm{n} \leq 1,50,000$
or if $\mathrm{n} \geq \mathrm{n}_{0}$, or
iii) $n_{i} \geq(\log N)^{4 \log \operatorname{loglog} N}$ for all $i=1,2,3, \ldots, t$, or
iv) Each $C_{2 n_{i}}$ is repeated at most $n_{i}$ times.

In [4], Selvam Avadayappan and R. Sinthu proved that $\mathrm{mK}_{2,3}$ is vertex prime. In [5], Selvam Avadayappan and R. Sinthu proved that $\mathrm{mK}_{3,3}$ and $\mathrm{mK}_{4,4}$ are vertex prime.

In this paper, we prove the vertex primeness of the union of $m$ disjoint copies of the complete bipartite graphs $\mathrm{K}_{5,5}, \mathrm{~K}_{6,6}, \mathrm{~K}_{7,7}$ and $\mathrm{K}_{8,8}$.

## II. RELATED WORK

Mean Graphs, Super Mean Graphs, Irregular Graphs, Domination Parameters in Graphs are the related works.

## III. PRESENTATION OF THE MAIN CONTRIBUTION OF THE PAPER / SCOPE OF RESEARCH

We prove that $\mathrm{mK}_{5,5}, \mathrm{mK}_{6,6}, \mathrm{mK}_{7,7}$ and $\mathrm{mK}_{8,8}$ are vertex prime graphs through the definition of vertex prime graphs. We also work on the general case of this theorem.

## IV. EXPERIMENTAL RESULTS

We proved that $\mathrm{mK}_{5,5}, \mathrm{mK}_{6,6}, \mathrm{~m} \mathrm{~K}_{7,7}$ and $\mathrm{mK}_{8,8}$ are vertex prime graphs.
Theorem 1 For any positive integer $m, \mathrm{mK}_{5,5}$ is a vertex prime graph.
Proof
Let $\mathrm{V}\left(\mathrm{mK}_{5,5}\right)=\left\{\mathrm{u}_{1}{ }^{1}, \mathrm{u}_{2}{ }^{1}, \mathrm{u}_{3}{ }^{1}, \mathrm{u}_{4}{ }^{1}, \mathrm{u}_{5}{ }^{1} ; \mathrm{u}_{1}{ }^{2}, \mathrm{u}_{2}{ }^{2}, \mathrm{u}_{3}{ }^{2}, \mathrm{u}_{4}{ }^{2}, \mathrm{u}_{5}{ }^{2} ; \ldots ; \mathrm{u}_{1}{ }^{\mathrm{m}}, \mathrm{u}_{2}{ }^{\mathrm{m}}, \mathrm{u}_{3}{ }^{\mathrm{m}}, \mathrm{u}_{4}{ }^{\mathrm{m}}, \mathrm{u}_{5}{ }^{\mathrm{m}} ; \mathrm{v}_{1}{ }^{1}, \mathrm{v}_{2}{ }^{1}, \mathrm{v}_{3}{ }^{1}, \mathrm{v}_{4}{ }^{1}, \mathrm{v}_{5}{ }^{1} ; \mathrm{v}_{1}{ }^{2}\right.$, $\left.v_{2}{ }^{2}, v_{3}{ }^{2}, v_{4}{ }^{2}, v_{5}{ }^{2} ; \ldots ; v_{1}{ }^{m}, v_{2}{ }^{m}, v_{3}{ }^{m}, v_{4}{ }^{m}, v_{5}{ }^{m}\right\}$
and

$$
\mathrm{E}\left(\mathrm{mK}_{5,5}\right)=\left\{\mathrm{u}_{\mathrm{i}}^{\mathrm{r}} \mathrm{v}_{\mathrm{j}}^{\mathrm{r}}: 1 \leq \mathrm{i} \leq 5,1 \leq \mathrm{j} \leq 5 ; 1 \leq \mathrm{r} \leq \mathrm{m}\right\}
$$

## Vol. 5, Issue 3, March 2016

Define f: $\mathrm{E}\left(\mathrm{mK}_{5,5}\right) \rightarrow\{1,2,3, \ldots, 25 \mathrm{~m}\}$ as follows:

$$
\begin{aligned}
& \mathrm{f}\left(\mathrm{u}_{1}{ }^{\mathrm{r}} \mathrm{v}_{\mathrm{j}}^{\mathrm{r}}\right)=25(\mathrm{r}-1)+\mathrm{j}, 1 \leq \mathrm{j} \leq 5,1 \leq \mathrm{r} \leq \mathrm{m} \text {; } \\
& \mathrm{f}\left(\mathrm{u}_{2}{ }^{\mathrm{r}} \mathrm{v}_{\mathrm{j}}{ }^{\mathrm{r}}\right)=25 \mathrm{r}-(\mathrm{j}+14), 1 \leq \mathrm{j} \leq 5,1 \leq \mathrm{r} \leq \mathrm{m} \text {; } \\
& \mathrm{f}\left(\mathrm{u}_{3}{ }^{\mathrm{r}} \mathrm{v}_{\mathrm{j}}^{\mathrm{r}}\right)=25 \mathrm{r}-(\mathrm{j}+9), 1 \leq \mathrm{j} \leq 5,1 \leq \mathrm{r} \leq \mathrm{m} \text {; } \\
& \mathrm{f}\left(\mathrm{u}_{4}{ }^{\mathrm{r}} \mathrm{v}_{\mathrm{j}}{ }^{\mathrm{r}}\right)=25 \mathrm{r}-(\mathrm{j}+4), 1 \leq \mathrm{j} \leq 5,1 \leq \mathrm{r} \leq \mathrm{m} ; \\
& \mathrm{f}\left(\mathrm{u}_{5}^{\mathrm{r}} \mathrm{v}_{\mathrm{j}}^{\mathrm{r}}\right)=25 \mathrm{r}-(\mathrm{j}-1), 1 \leq \mathrm{j} \leq 5,1 \leq \mathrm{r} \leq \mathrm{m} .
\end{aligned}
$$

Consider the vertex $\mathrm{u}_{1}{ }^{\mathrm{r}}$

$$
\begin{aligned}
& \operatorname{gcd}\left(\left(\mathrm{f}\left(\mathrm{u}_{1}{ }^{\mathrm{r}} \mathrm{v}_{\mathrm{j}}^{\mathrm{r}}\right), 1 \leq \mathrm{j} \leq 5,1 \leq \mathrm{r} \leq \mathrm{m}\right)\right) \\
& \quad=\operatorname{gcd}(25(\mathrm{r}-1)+\mathrm{j}, 1 \leq \mathrm{j} \leq 5,1 \leq \mathrm{r} \leq \mathrm{m}) \\
& \quad=1
\end{aligned}
$$

Similarly one can check for the remaining vertices $u_{2}{ }^{\mathrm{r}}, \mathrm{u}_{3}{ }^{\mathrm{r}}, \mathrm{u}_{4}{ }^{\mathrm{r}}, \mathrm{u}_{5}{ }^{\mathrm{r}}, \mathrm{v}_{1}{ }^{\mathrm{r}}, \mathrm{v}_{2}{ }^{\mathrm{r}}, \mathrm{v}_{3}{ }^{\mathrm{r}} \mathrm{v}_{4}{ }^{\mathrm{r}}$ and $\mathrm{v}_{5}{ }^{\mathrm{r}}$.
Clearly $f$ is a vertex prime labeling of $\mathrm{mK}_{5,5}$.
Hence $\mathrm{mK}_{5,5}$ is a vertex prime graph.
For example, the edge labels of a vertex prime labeling of $4 \mathrm{~K}_{5,5}$ is shown in Figure 2.

Theorem 2 For any positive integer $\mathrm{m}, \mathrm{mK}_{6,6}$ is a vertex prime graph.
Proof
Let $V\left(\mathrm{mK}_{6,6}\right)=\left\{\mathrm{u}_{1}{ }^{1}, \mathrm{u}_{2}{ }^{1}, \mathrm{u}_{3}{ }^{1}, \mathrm{u}_{4}{ }^{1}, \mathrm{u}_{5}{ }^{1}, \mathrm{u}_{6}{ }^{1} ; \mathrm{u}_{1}{ }^{2}, \mathrm{u}_{2}{ }^{2}, \mathrm{u}_{3}{ }^{2}, \mathrm{u}_{4}{ }^{2}, \mathrm{u}_{5}{ }^{2}, \mathrm{u}_{6}{ }^{2} ; \ldots ; \mathrm{u}_{1}{ }^{\mathrm{m}}, \mathrm{u}_{2}{ }^{\mathrm{m}}, \mathrm{u}_{3}{ }^{\mathrm{m}}, \mathrm{u}_{4}{ }^{\mathrm{m}}, \mathrm{u}_{5}{ }^{\mathrm{m}}, \mathrm{u}_{6}{ }^{\mathrm{m}} ; \mathrm{v}_{1}{ }^{1}, \mathrm{v}_{2}{ }^{1}, \mathrm{v}_{3}{ }^{1}\right.$, $\left.\mathrm{v}_{4}{ }^{1}, \mathrm{v}_{5}{ }^{1}, \mathrm{v}_{6}{ }^{1} ; \mathrm{v}_{1}{ }^{2}, \mathrm{v}_{2}{ }^{2}, \mathrm{v}_{3}{ }^{2}, \mathrm{v}_{4}{ }^{2}, \mathrm{v}_{5}{ }^{2}, \mathrm{v}_{6}{ }^{2} ; \ldots ; \mathrm{v}_{1}{ }^{\mathrm{m}}, \mathrm{v}_{2}{ }^{\mathrm{m}}, \mathrm{v}_{3}{ }^{\mathrm{m}}, \mathrm{v}_{4}{ }^{\mathrm{m}}, \mathrm{v}_{5}{ }^{\mathrm{m}}, \mathrm{v}_{6}{ }^{\mathrm{m}}\right\}$
and

$$
E\left(m K_{6,6}\right)=\left\{u_{i}^{r} v_{j}^{r}: 1 \leq i \leq 6,1 \leq j \leq 6 ; 1 \leq r \leq m\right\}
$$

Define f: $\mathrm{E}\left(\mathrm{mK}_{6,6}\right) \rightarrow\{1,2,3, \ldots, 36 \mathrm{~m}\}$ as follows:

$$
\mathrm{f}\left(\mathrm{u}_{1}^{\mathrm{r}} \mathrm{v}_{\mathrm{j}}^{\mathrm{r}}\right)=36(\mathrm{r}-1)+\mathrm{j}, 1 \leq \mathrm{j} \leq 6,1 \leq \mathrm{r} \leq \mathrm{m} ;

& \mathrm{f}\left(\mathrm{u}_{3}{ }^{\mathrm{r}} \mathrm{v}_{\mathrm{j}}^{\mathrm{r}}\right)=64 \mathrm{r}-(\mathrm{j}+39), 1 \leq \mathrm{j} \leq 8,1 \leq \mathrm{r} \leq \mathrm{m} \text {; } \\
& \mathrm{f}\left(\mathrm{u}_{4}{ }^{\mathrm{r}} \mathrm{v}_{\mathrm{j}}^{\mathrm{r}}\right)=64 \mathrm{r}-(\mathrm{j}+31), 1 \leq \mathrm{j} \leq 8,1 \leq \mathrm{r} \leq \mathrm{m} \text {; } \\
& \mathrm{f}\left(\mathrm{u}_{5}^{\mathrm{r}} \mathrm{v}_{\mathrm{j}}{ }^{\mathrm{r}}\right)=64 \mathrm{r}-(\mathrm{j}+23), 1 \leq \mathrm{j} \leq 8,1 \leq \mathrm{r} \leq \mathrm{m} \text {; } \\
& f\left(u_{6}{ }^{r} v_{j}{ }^{r}\right)=64 r-(j+15), 1 \leq j \leq 8,1 \leq r \leq m ; \\
& \mathrm{f}\left(\mathrm{u}_{7}^{\mathrm{r}} \mathrm{v}_{\mathrm{j}}^{\mathrm{r}}\right)=64 \mathrm{r}-(\mathrm{j}+7), 1 \leq \mathrm{j} \leq 8,1 \leq \mathrm{r} \leq \mathrm{m} \text {; } \\
& \mathrm{f}\left(\mathrm{u}_{8}{ }^{\mathrm{r}} \mathrm{v}_{\mathrm{j}}^{\mathrm{r}}\right)=64 \mathrm{r}-(\mathrm{j}-1), 1 \leq \mathrm{j} \leq 8,1 \leq \mathrm{r} \leq \mathrm{m} .
\end{aligned}
$$

Consider the vertex $\mathrm{u}_{2}{ }^{\mathrm{r}}$.
$\operatorname{gcd}\left(\left(\mathrm{f}\left(\mathrm{u}_{2}{ }^{\mathrm{r}} \mathrm{v}_{\mathrm{j}}^{\mathrm{r}}\right), 1 \leq \mathrm{j} \leq 8,1 \leq \mathrm{r} \leq \mathrm{m}\right)\right)$

$$
\begin{aligned}
& =\operatorname{gcd}(64 r-(j+47), 1 \leq j \leq 8,1 \leq r \leq m) \\
& =1
\end{aligned}
$$

Similarly one can check for the remaining vertices $u_{1}{ }^{\mathrm{r}}, \mathrm{u}_{3}{ }^{\mathrm{r}}, \mathrm{u}_{4}{ }^{\mathrm{r}}, \mathrm{u}_{5}{ }^{\mathrm{r}}, \mathrm{u}_{6}{ }^{\mathrm{r}}, \mathrm{u}_{7}{ }^{\mathrm{r}}, \mathrm{u}_{8}{ }^{\mathrm{r}}, \mathrm{v}_{1}{ }^{\mathrm{r}}, \mathrm{v}_{2}{ }^{\mathrm{r}}, \mathrm{v}_{3}{ }^{\mathrm{r}}, \mathrm{v}_{4}{ }^{\mathrm{r}}, \mathrm{v}_{5}{ }^{\mathrm{r}}, \mathrm{v}_{6}{ }^{\mathrm{r}}, \mathrm{v}_{7}^{\mathrm{r}}$ and $\mathrm{v}_{8}{ }^{\mathrm{r}}$.
Clearly $f$ is a vertex prime labeling of $\mathrm{mK}_{8,8}$.
Hence $\mathrm{mK}_{8,8}$ is a vertex prime graph.
For example, the edge labels of a vertex prime labeling of $4 \mathrm{~K}_{8,8}$ is shown in Figure 5.

$4 K_{8,8}$
Figure 5
Here first set represents the edge labels of the edges incident with the first vertex of the first copy of $\mathrm{K}_{8,8}$ and so on.

## V. CONCLUSION

In this paper, we present Vertex Prime Labeling if its edges can be labeled with distinct integers. Thus we prove that $\mathrm{mK}_{5,5}, \mathrm{mK}_{6,6}, \mathrm{~m}_{7,7}$ and $\mathrm{mK}_{8,8}$ are vertex prime graphs. Some known graphs and unknown graphs are illustrated in a simple manner.

## VI. ACKNOWLEDGEMENT

The authors of this paper would like to thank the reviewers for their valuable suggestions.
