# APPROXIMATION OF THE CONJUGATE OF FUNCTION BELONGING TO LIP $\alpha$ CLASS BY (E,1)(C,1) MEANS OF THE CONJUGATE SERIES OF IT'S FOURIER SERIES 

Binod Prasad Dhakal<br>Associate professor, Central Department of Mathematics (Education), Tribhuvan University, Nepal

#### Abstract

In this In this paper a new estimate on degree of approximation of conjugate function $f$ conjugate to a function f belonging to Lip $\alpha$ class has been determined by ( $\mathrm{E}, 1$ ) ( $\mathrm{C}, 1$ ) summability of conjugate series of a Fourier series..

Keywords: Degree of approximation, (E,1) (C,1) Summability, Fourier series, Lip $\alpha$ class.

## I. INTRODUCTION

A function $\mathrm{f} \in \operatorname{Lip} \alpha$ if $|\mathrm{f}(\mathrm{x}+\mathrm{t})-\mathrm{f}(\mathrm{x})|=\mathrm{O}\left(|\mathrm{t}|^{\alpha}\right)$ for $0<\alpha \leq 1$.
The degree of approximation $E_{n}(f)$ of a function $f: R \rightarrow R$ by a trigonometric polynomial $t_{n}$ of degree $n$ is defined by (Zygmund (1959))

$$
E_{n}(f)=\left\|t_{n}-f\right\|_{\infty}=\sup .\left\{\left|\mathrm{t}_{\mathrm{n}}(\mathrm{x})-\mathrm{f}(\mathrm{x})\right|: \mathrm{x} \in \mathfrak{R}\right\} .
$$

Let f be $2 \pi$ periodic, integrable over $(-\pi, \pi)$ in the sense of Lebesgue and belonging Lip $\alpha$ class, then its Fourier series is given by

$$
\begin{align*}
& f(t)=\frac{1}{2} a_{o}+\sum_{n=1}^{\infty}\left(a_{n} \cos n t+b_{n} \sin n t\right)=\frac{1}{2} a_{o}+\sum_{n=1}^{\infty} A_{n}(t) \quad \text { and its conjugate series is } \\
& \sum_{n=1}^{\infty}\left(a_{n} \sin n t-b_{n} \cos n t\right)=-\sum_{n=1}^{\infty} B_{n}(t) \tag{1}
\end{align*}
$$

Let $\sum_{\mathrm{n}=0}^{\infty} \mathrm{u}_{\mathrm{n}}$ be the infinite series whose $\mathrm{n}^{\text {th }}$ partial sum is given by $\mathrm{S}_{\mathrm{n}}=\sum_{\mathrm{k}=0}^{\mathrm{n}} \mathrm{u}_{\mathrm{k}}$.
The Cesàro means $(C, 1)$ of sequence $\left\{S_{n}\right\}$ is $\sigma_{n}=\frac{1}{n+1} \sum_{k=0}^{n} S_{k}$.
If $\lim _{\mathrm{n} \rightarrow \infty} \sigma_{\mathrm{n}}=S$ then sequence $\left\{\mathrm{S}_{\mathrm{n}}\right\}$ or the infinite series $\sum_{\mathrm{n}=0}^{\infty} \mathrm{u}_{\mathrm{n}}$ is said to be summable by Cesàro means $(\mathrm{C}, 1)$ to S .
(Hardy (1913), p.96)
The Euler means (E, 1) of sequence $\left\{S_{n}\right\}$ is $E_{n}^{(1)}=\frac{1}{2^{n}} \sum_{k=0}^{n}\binom{n}{k} S_{k}$.
If $\lim _{n \rightarrow \infty} E_{n}^{(1)}=$ S then sequence $\left\{S_{n}\right\}$ or infinite series $\sum_{n=0}^{\infty} u_{n}$ is said to be summable by Euler means method $(E, 1)$ to $S$.
The (E, 1) (C, 1) transformation of $\left\{S_{n}\right\}$, denoted by $t_{n}^{E C}$, is given by

$$
\mathrm{t}_{\mathrm{n}}^{\mathrm{EC}}=\frac{1}{2^{\mathrm{n}}} \sum_{\mathrm{k}=0}^{\mathrm{n}}\binom{\mathrm{n}}{\mathrm{k}} \frac{1}{\mathrm{k}+1} \sum_{\mathrm{r}=\mathrm{o}}^{\mathrm{k}} \mathrm{~S}_{\mathrm{r}}
$$

If $\lim _{n \rightarrow \infty} t_{n}^{E C}=S$ then sequence $\left\{S_{n}\right\}$ or infinite series $\sum_{n=0}^{\infty} u_{n}$ is said to be summable by $(E, 1)(C, 1)$ means method to $S$.

## International Journal of Innovative Research in Science, Engineering and Technology Vol 2, Issue 3, March 2013

If a function f is Lebesgue integrable then

$$
\begin{aligned}
\tilde{\mathrm{f}}(\mathrm{x}) & =-\frac{1}{2 \pi} \int_{0}^{\pi} \psi(\mathrm{t}) \cot (\mathrm{t} / 2) \mathrm{dt} \\
& =-\frac{1}{2 \pi} \lim _{\varepsilon \rightarrow 0} \int_{\varepsilon}^{\pi} \psi(\mathrm{t}) \cot (\mathrm{t} / 2) \mathrm{dt}
\end{aligned}
$$

exist for all x (Zygmund (1959), p. 131).
We use following notations.

$$
\psi(\mathrm{t})=\mathrm{f}(\mathrm{x}+\mathrm{t})-\mathrm{f}(\mathrm{x}-\mathrm{t}),
$$

$$
\tilde{N}_{\mathrm{n}}^{\mathrm{EC}}=\frac{1}{2^{\mathrm{n}+2} \pi} \sum_{\mathrm{k}=0}^{\mathrm{n}}\binom{\mathrm{n}}{\mathrm{k}} \frac{\sin (\mathrm{k}+1) \mathrm{t}}{(\mathrm{k}+1) \sin ^{2}(\mathrm{t} / 2)} .
$$

## II. MAIN THEOREM

There are several results, for example, Alexits (1965), Chandra (1975), Sahney \& Goel (1973) and Alexits \& Leindler (1965) for the degree of approximation of functions $f \in \operatorname{Lip} \alpha$, but most of these results are not satisfied for $\mathrm{n}=0,1$ or $\alpha=1$.Therefore, this deficiency has motivated to investigate degree of approximation of functions belonging to Lip $\alpha$ considering cases $0<\alpha<1$ and $\alpha=1$ separately. Considering theses specific cases separately, we have obtained better and sharper estimate of $\tilde{f}(x)$, conjugate of Lip $\alpha$ than all previously known results as follows,
Theorem: If $\mathrm{f}: \mathrm{R} \rightarrow \mathrm{R}$ is $2 \pi$ periodic, Lebesgue integrable function in $(-\pi, \pi)$ and belonging to Lip $\alpha$, $0<\alpha \leq 1$, then the degree of approximation of $\tilde{f}(x)$, the conjugate of a function $f \in \operatorname{Lip} \alpha$ by (E,1) (C,1) means $\underset{\mathrm{t}_{\mathrm{n}}}{\sim \mathrm{EC}}=\frac{1}{2^{\mathrm{n}}} \sum_{\mathrm{k}=0}^{\mathrm{n}}\binom{\mathrm{n}}{\mathrm{k}} \frac{1}{\mathrm{k}+1} \sum_{\mathrm{r}=0}^{\mathrm{k}} \tilde{\mathrm{S}}_{\mathrm{r}} \quad$ of the conjugate series of the Fourier series (1) satisfies, for $\mathrm{n}=0,1,2 \ldots$,

## III. LEMMAS

We need the following lemmas for the proof of the theorem.
Lemma 1: Let $\tilde{\mathrm{N}}_{\mathrm{n}}^{\mathrm{EC}}(\mathrm{t})=\frac{1}{2^{\mathrm{n}+2} \pi} \sum_{\mathrm{k}=0}^{\mathrm{n}}\binom{\mathrm{n}}{\mathrm{k}} \frac{\sin (\mathrm{k}+1) \mathrm{t}}{(\mathrm{k}+1) \sin ^{2} \frac{\mathrm{t}}{2}}$ then

$$
\tilde{\mathrm{N}}_{\mathrm{n}}^{\mathrm{EC}}(\mathrm{t})=\mathrm{O}\left(\frac{1}{\mathrm{t}}\right) \text {, for } 0<\mathrm{t}<\frac{1}{\mathrm{n}+1} \text {. }
$$

Proof:

$$
\begin{aligned}
& \tilde{\mathrm{N}}_{\mathrm{n}}^{\mathrm{EC}}(\mathrm{t})= \frac{1}{2^{\mathrm{n}+2} \pi} \sum_{\mathrm{k}=0}^{\mathrm{n}}\binom{\mathrm{n}}{\mathrm{k}} \frac{\sin (\mathrm{k}+1) \mathrm{t}}{(\mathrm{k}+1) \sin ^{2} \frac{\mathrm{t}}{2}} \\
& \leq \frac{1}{2^{\mathrm{n}+2} \pi} \sum_{\mathrm{k}=0}^{\mathrm{n}}\binom{\mathrm{n}}{\mathrm{k}} \frac{\sin \mathrm{t}}{\sin ^{2} \frac{\mathrm{t}}{2}} \\
& \quad \leq \frac{1}{2^{\mathrm{n}+1} \pi} \sum_{\mathrm{k}=0}^{\mathrm{n}}\binom{\mathrm{n}}{\mathrm{k}} \frac{\cos \frac{\mathrm{t}}{2}}{\sin \frac{\mathrm{t}}{2}}
\end{aligned}
$$

## International Journal of Innovative Research in Science, Engineering and Technology

$$
\begin{align*}
& \leq \frac{1}{2^{\mathrm{n}+1} \pi \mathrm{t}} \sum_{\mathrm{k}=0}^{\mathrm{n}}\binom{\mathrm{n}}{\mathrm{k}} \\
& =\frac{1}{2 \pi \mathrm{t}} \\
& =\mathrm{O}\left(\frac{1}{\mathrm{t}}\right) \tag{2}
\end{align*}
$$

Lemma 2: Let $\tilde{\mathrm{N}}_{\mathrm{n}}^{\mathrm{EC}}(\mathrm{t})=\frac{1}{2^{\mathrm{n}+2} \pi} \sum_{\mathrm{k}=0}^{\mathrm{n}}\binom{\mathrm{n}}{\mathrm{k}} \frac{\sin (\mathrm{k}+1) \mathrm{t}}{(\mathrm{k}+1) \sin ^{2} \frac{\mathrm{t}}{2}}$ then

$$
\tilde{\mathrm{N}}_{\mathrm{n}}^{\mathrm{EC}}(\mathrm{t})=\mathrm{O}\left(\frac{1}{(\mathrm{n}+1) \mathrm{t}^{2}}\right) \text {, for } \frac{1}{\mathrm{n}+1}<\mathrm{t}<\pi
$$

Proof:

$$
\begin{align*}
\tilde{N}_{n}^{E C}(t) & =\frac{1}{2^{n+2} \pi} \sum_{k=0}^{n}\binom{n}{k} \frac{\sin (k+1) t}{(k+1) \sin ^{2} \frac{t}{2}} \\
\left|\tilde{\tilde{N}}_{n}^{E C}(t)\right| \leq & \frac{1}{2^{n+2} \pi} \sum_{k=0}^{n}\binom{n}{k} \frac{|\sin (k+1) t|}{(k+1)\left|\sin ^{2} \frac{t}{2}\right|} \\
& =\frac{1}{2^{n+2} \pi} \sum_{k=0}^{n}\binom{n}{k} \frac{1}{(k+1)\left|\sin ^{2} \frac{t}{2}\right|} \\
& \leq \frac{\pi}{2^{n+2} t^{2}} \sum_{k=0}^{n}\binom{n}{k} \frac{1}{(k+1)} \\
& =\frac{\pi}{2^{n+2} t^{2}}\left(\frac{2^{n+1}-1}{n+1}\right) \\
& =\frac{\pi}{2(n+1) t^{2}}\left(1-\frac{1}{2^{n+1}}\right) \\
& \leq \frac{\pi}{2(n+1) t^{2}} \\
& =O\left(\frac{1}{(n+1) t^{2}}\right) . \tag{3}
\end{align*}
$$

## IV. PROOF OF THE THEOREM

The $n^{\text {th }}$ partial sum $S_{n}(x)$ of conjugate series (1) is given by

$$
\tilde{\mathrm{S}}_{\mathrm{n}}(\mathrm{x})-\left(-\frac{1}{2 \pi} \int_{0}^{\pi} \psi(\mathrm{t}) \cot \frac{\mathrm{t}}{2} \mathrm{dt}\right)=\frac{1}{2 \pi} \int_{0}^{\pi} \psi(\mathrm{t}) \frac{\cos \left(\mathrm{n}+\frac{1}{2}\right) \mathrm{t}}{\sin \frac{\mathrm{t}}{2}} \mathrm{dt} .
$$

$\sim$ EC
$\tilde{t}_{n}$ EC transform of the $\tilde{S}_{n}(x)$ is given by

$$
\begin{gathered}
\tilde{\mathrm{t}}_{\mathrm{n}}^{\mathrm{EC}}-\left(-\frac{1}{2 \pi} \int_{0}^{\pi} \psi(\mathrm{t}) \cot \frac{\mathrm{t}}{2} \mathrm{dt}\right)=\int_{0}^{\pi} \psi(\mathrm{t}) \frac{1}{2^{\mathrm{n}+2} \pi} \sum_{\mathrm{k}=0}^{\mathrm{n}}\binom{\mathrm{n}}{\mathrm{k}} \frac{\sin (\mathrm{k}+1) \mathrm{t}}{(\mathrm{k}+1) \sin ^{2} \frac{\mathrm{t}}{2}} \mathrm{dt} \\
=\int_{0}^{\pi} \psi(\mathrm{t}) \tilde{N}_{\mathrm{n}}^{\mathrm{EC}}(\mathrm{t}) \mathrm{dt}
\end{gathered}
$$

## International Journal of Innovative Research in Science, Engineering and Technology

 Vol 2, Issue 3, March 2013$$
\begin{align*}
& =\int_{0}^{\frac{1}{n+1}} \psi(\mathrm{t}) \tilde{\mathrm{N}}_{\mathrm{n}}^{\mathrm{EC}}(\mathrm{t}) \mathrm{dt}+\int_{\frac{1}{\mathrm{n}+1}}^{\pi} \psi(\mathrm{t}) \tilde{\mathrm{N}}_{\mathrm{n}}^{\mathrm{EC}}(\mathrm{t}) \mathrm{dt} \\
& \quad=\mathrm{I}_{1}+\mathrm{I}_{2} \text {, say. } \tag{4}
\end{align*}
$$

Using Lemma 1 and the fact that $\psi \in \operatorname{Lip} \alpha$, we have,

$$
\begin{align*}
& \left|\mathrm{I}_{1}\right|=\mathrm{O}\left(\int_{0}^{\frac{1}{n+1}} \mathrm{t}^{\alpha+1} \mathrm{dt}\right) \\
& =\mathrm{O}\left(\left(\frac{\mathrm{t}^{\alpha}}{\alpha}\right)_{0}^{\frac{1}{n+1}}\right] \\
& =\mathrm{O}\left(\frac{1}{(\mathrm{n}+1)^{\alpha}}\right) . \tag{5}
\end{align*}
$$

Now, using Lemma 2, we have

$$
\begin{align*}
& {\left[I_{2}\right]=O\left(\frac{1}{n+1}\right) \int_{\frac{1}{n+1}}^{\pi} t^{\alpha-2} d t} \\
& = \begin{cases}O\left(\frac{1}{n+1}\right)\left[\frac{t^{\alpha-1}}{\alpha-1}\right]_{\frac{1}{n+1}}^{\pi}, & \text { for } 0<\alpha<1 \\
O\left(\frac{1}{n+1}\right)[\log t]_{\frac{1}{n+1}}^{\pi}, & \text { for } \alpha=1\end{cases} \\
& =\left\{\begin{array}{l}
O\left(\frac{1}{n+1}\right)\left(\frac{1}{1-\alpha}\right)\left[\frac{1}{(n+1)^{\alpha-1}}-\pi^{\alpha-1}\right], \text { for } 0<\alpha<1 \\
O\left(\frac{1}{n+1}\right)\left[\log \pi-\log \left(\frac{1}{n+1}\right)\right], \text { for } \alpha=1
\end{array}\right. \\
& =\left\{\begin{array}{l}
O\left(\frac{1}{1-\alpha}\right)\left[\frac{1}{(n+1)^{\alpha}}+\frac{\pi^{\alpha-1}}{n+1}\right], \quad \text { for } 0<\alpha<1 \\
O\left(\frac{1}{n+1}\right)[\log (n+1) \pi], \quad \text { for } \quad \alpha=1
\end{array}\right. \\
& = \begin{cases}O\left(\frac{1}{(n+1)^{\alpha}}\right), & \text { for } 0<\alpha<1 \\
O\left[\frac{\log (n+1) \pi}{(n+1)}\right], & \text { for } \alpha=1 .\end{cases} \tag{6}
\end{align*}
$$

Collecting (.4), (5), (6); we have

$$
\begin{aligned}
\left|\mathrm{t}_{\mathrm{n}}^{\mathrm{EC}}(\mathrm{x})-\mathrm{f}(\mathrm{x})\right| & = \begin{cases}\mathrm{O}\left(\frac{1}{(\mathrm{n}+1)^{\alpha}}\right), \quad \text { for } 0<\alpha<1 \\
\mathrm{O}\left(\frac{1}{\mathrm{n}+1}\right)+\mathrm{O}\left(\frac{\log (\mathrm{n}+1) \pi}{(\mathrm{n}+1)}\right), & \text { for } \alpha=1\end{cases} \\
& =\left\{\begin{array}{l}
\mathrm{O}\left(\frac{1}{(\mathrm{n}+1)^{\alpha}}\right), \quad \text { for } 0<\alpha<1 \\
\mathrm{O}\left(\frac{\log (\mathrm{n}+1) \pi \mathrm{e}}{(\mathrm{n}+1)}\right), \quad \text { for } \alpha=1
\end{array}\right.
\end{aligned}
$$

or

$$
\begin{aligned}
& = \begin{cases}O\left(\frac{1}{(n+1)^{\alpha}}\right), & \text { for } 0<\alpha<1 \\
O\left(\frac{\log (\mathrm{n}+1) \pi \mathrm{e}}{(\mathrm{n}+1)}\right), \quad \text { for } \alpha=1 .\end{cases}
\end{aligned}
$$

This completes the proof of theorem.

## V. CONCLUSION

In this paper a new theorem on degree of approximation of conjugate function $f$ conjugate to a function $f$ belonging to Lip $\alpha$ class has been established by $(\mathrm{E}, 1)(\mathrm{C}, 1)$ summability of conjugate series of a Fourier series.
